

**UNIVERSITY OF MUMBAI**

**No. UG/93 of 2016-17**

**CIRCULAR:-**

A reference is invited to the Syllabi relating to the M.Sc. degree programmes **vide** this office Circular No.UG/150 of 2012-13 dated 20<sup>th</sup> March, 2013 and the Head, University Department of Life Science and the Principals of affiliated Colleges in Science are hereby informed that the recommendation made by Ad-hoc Board of Life Studies in Science at its meeting held on 31<sup>st</sup> May, 2016 has been accepted by the Academic Council at its meeting held on 24<sup>th</sup> June, 2016 **vide** item No.4.46 and that in accordance therewith, the revised syllabus as per Choice Based Credit System for (Sem. I & II) of M.Sc. degree Programmes in the course of Life Science, which is available on the University's web site ([www.mu.ac.in](http://www.mu.ac.in)) and that the same has been brought into force with effect from the academic year 2016-17.

MUMBAI – 400 032

October, 2016

To,

  
(Dr.M.A.Khan)  
REGISTRAR

The Head, University Department of Life Science and the Principals of affiliated Colleges in Science.

**A.C/4.46 /24/06/2016**

\*\*\*\*\*

No. UG/93-A of 2016-17

MUMBAI-400 032

25 October, 2016

Copy forwarded with compliments for information to:-

- 1) The Dean, Faculty of Science,
- 2) The Chairman, Board of Studies in Life Science,
- 3) The Director, Board of College and University Development,
- 4) The Professor-cum- Director, Institute of Distance and Open Learning (IDOL),
- 5) The Controller of Examinations,
- 6) The Co-Ordinator, University Computerization Centre.

## SEMESTER I

COURSE CODE	UNIT	TOPIC HEADINGS	CREDITS	L / WEEK
<b>Paper I</b>	<b>Environmental Biology, Evolution, Genetics</b>			
<b>PSLSCT101</b>	I	Environmental biology	4	4
	II	Biodiversity		4
	III	Evolution		4
	IV	Genetics		4
<b>Paper II</b>	<b>Cell and Molecular Biology</b>			
<b>PSLSC102</b>	I	Cell Biology	4	4
	II	Cell cycle and cell death		4
	III	Basics of life Processes I		4
	IV	Basics of life Processes II		4
<b>Paper III</b>	<b>Biochemistry</b>			
<b>PSLSC103</b>	I	Proteins and Lipids	4	4
	II	Carbohydrates, vitamins and minerals		4
	III	Enzymology		4
	IV	Thermodynamics and Electron Transport Chain		4
<b>Paper IV</b>	<b>Biostatistics and Instrumentation</b>			
<b>PSLSC104</b>	I	Biostatistics I	4	4

	II	Biostatistics II		4
	III	Instrumentation I		4
	IV	Instrumentation II		4

## SEMESTER II

COURSE CODE	UNIT	TOPIC HEADINGS	CREDITS	L / WEEK
<b>Paper I</b>	<b>Microbiology, Immunology and Plant Physiology</b>			
<b>PSLSCT201</b>	I	Microbiology	4	4
	II	Immunology		4
	III	Plant physiology I		4
	IV	Plant physiology II		4
<b>Paper II</b>	<b>Molecular Biology and Cell signaling</b>			
<b>PSLSC202</b>	I	DNA replication, repair and recombination	4	4
	II	Gene and Epigenetics		4
	III	Gene Expression Regulation		4
	IV	Cell communication and signalling		4
<b>Paper III</b>	<b>Animal Science</b>			
<b>PSLSC203</b>	I	Animal Physiology	4	4
	II	Developmental Biology		4
	III	Neurobiology		4
	IV	Endocrinology		4
<b>Paper IV</b>	<b>Bioinformatics, IPR and Bioethics</b>			
<b>PSLSC204</b>	I	Bioinformatics	4	4

	II	Alignment problem and solutions		4
	III	Genomics and Proteomics		4
	IV	IPR and Bioethics		4

## SEMESTER I

### PAPER - PSLSCT101: Environmental Biology, Evolution, Genetics

#### Unit I: Environmental biology (15L)

**Ecosystems:** Concept, structure, function and dynamics of ecosystem, components, ecological succession; Habitat and niche, Food web and energy flow, productivity and biogeochemical cycles, Types of ecosystems (terrestrial (forest, grassland) and aquatic (fresh water, marine, eustarine), ecosystem modelling and resource management and conservation.

**Community ecology:** Nature of communities; community structure and attributes; levels of species diversity and its measurement; edges and ecotones.

**Population ecology:** Characteristics of a population; population growth curves; population regulation; life history strategies (*r* and *K* selection); concept of metapopulation – demes and dispersal.

#### **Renewable energy and biofuels**

**Environmental health:** Environmental stress and adaptation, effects of pollution on living systems, environmental pollutants related human disorders, biomonitoring indicators, bioremediation of pollutants.

**Toxicology:** Basic principles of toxicology including LD<sub>50</sub> and ED<sub>50</sub>, management of acute intoxication, Biochemical and Genetic mechanism of natural detoxification.

#### Unit II: Biodiversity (15L)

**Biodiversity:** Concept, characterization, generation, maintenance and loss, Magnitude and distribution of biodiversity, economic value, bioprospecting, biodiversity management approaches.

**Species interactions:** Types of interactions, interspecific competition, herbivory, carnivory, pollination, symbiosis.

**Conservation biology:** Principles of conservation, major approaches to management, conservation strategies and cryopreservation.

**Genetically modified organisms (GMOs):** Definition of GMOs, applications in food and agriculture, Release of GMO in environment – risk analysis, risk assessment and risk management, Identification of GMO in environment and their impact, emergence of drugs/ pesticide/ herbicide resistance and disease burden.

#### Unit III: Evolution (15L)

**Emergence of evolutionary thoughts:** Lamarck; Darwin—concepts of variation, adaptation, struggle, fitness and natural selection; speciation; Mendelism; spontaneity of mutations; the evolutionary synthesis.

**Origin of cells and unicellular evolution:** Origin of basic biological molecules; abiotic synthesis of organic monomers and polymers; concept of Oparin and Haldane; experiment of Miller (1953); the first cell; evolution of prokaryotes; origin of eukaryotic cells; evolution of unicellular eukaryotes; anaerobic metabolism, photosynthesis and aerobic metabolism.

**Paleontology and evolutionary history:** The evolutionary time scale; eras, periods and epoch; major events in the evolutionary time scale; origins of unicellular and multicellular organisms; major groups of plants and animals; stages in primate evolution including Homo.

**Molecular Evolution:** Concepts of neutral evolution, molecular divergence and molecular clocks; origin of new genes and proteins; gene duplication and divergence, molecular taxonomy.

#### **Unit IV: Genetics (15L)**

**Extensions of Mendelian principles:** Codominance, incomplete dominance, Multiple alleles, Lethal and Essential Genes.

**Non Mendelian Inheritance:** Cytoplasmic inheritance, organelle genetics, maternal inheritance.

**Microbial genetics:** transformation, conjugation, transduction and sex-duction, mapping genes by interrupted mating.

**Quantitative genetics:** Pleiotropy and epistasis, polygenic inheritance, heritability and its measurements, QTL mapping, linkage and crossing over.

**Population Genetics:** gene pool, gene frequency, Hardy Weinberg Law and its role in evolution and speciation, Pedigree analysis.

**Gene mapping methods:** Linkage maps and lod score for linkage testing, tetrad analysis, mapping with molecular markers, mapping by using somatic cell hybrids, development of mapping population in plants.

**Human Genome Project and Genome wide associated studies.**

#### **PRACTICALS: PSLSCP 101**

1. Study of animal interaction:
  - a. Commensalism: Hermit crab and sea anemone, Echinus and shark (or any other example).
  - b. Mutualism: Termite and Trichonympha (or any other example).
  - c. Antibiosis: Effect of antibiotic on bacterial growth on a petri plate (or any other example).
  - d. Parasitism: Ectoparasite – head louse and bed bug (or any other example).
  - e. Endoparasite: Trichinellaspiralis (or any other example).
  - f. Predation: Praying mantis and spider (or any other example).
2. Determination of population density (Daphnia or any suitable organism) by sub sampling method.
3. Comparison of two population of a species collected from two areas.

4. Effect of toxicity in water on *Daphnia*.
5. Production/ Extraction of biofuel from plant source.
6. Problems in Genetics
  - a. Problem solving: Multiple alleles, Lethal genes
  - b. Problem solving: Hardy Weinberg equation, Pedigree analysis.
7. Transformation of *E .coli* cells.

## **PAPER - PSLSCT102: Cell and Molecular Biology**

### **Unit I: Cell Biology (15L)**

**Plasma membrane:** Different model membrane and their structures, lipid bilayer.

**Endoplasmic reticulum:** RER and SER, synthesis and transport of protein into the lumen of the ER and its control. Oil bodies and protein bodies in plants.

**Golgi complex:** Cisternal progression, secretory pathway – transport to the plasma membrane and the extracellular space.

**Nucleus:** including nuclear pore, lamins, chromatin.

**Other organelles:** Lysosomes, peroxisomes, mitochondria, chloroplasts and vacuoles.

**Cytoskeleton:** Filaments and concept of cellular architecture and motility.

### **Unit II: Cell cycle and Cell Death: (15L)**

Molecular events in the various cell cycle stages (without experimental details).

**Introduction:** Stages of the cell cycle – G<sub>0</sub>, G<sub>1</sub>, S, G<sub>2</sub> and M.

**Concept of cyclin and CDKs;** activation of the cyclin-CDK complexes.

**G<sub>1</sub> cyclins:** Cln1, Cln2 and Cln3 and its relevance in commitment to cell division.

**S phase and G<sub>2</sub> phase:** S phase cyclin, its inhibitors and pre-replication complex and its significance in DNA replication in the cell cycle.

**M phase:** Prophase, Metaphase, Anaphase and Telophase, condensins, securin, separase and the end of mitosis.

**Apoptosis:** Concept of programmed cell death, Comparison with necrosis, Function of apoptosis in development and maintenance (formation of digits, removal of old cells etc.).

### **Unit III: Basics of Life processes I (15L)**

**Transcription:** Classes of RNA molecules - structure and function.

**Basic features of RNA synthesis:** Transcription factors and machinery.

**Transcription in prokaryotes:** *E. coli* RNA polymerase, transcription activators and repressors, initiation, elongation and termination, processing of tRNA and rRNA in *E. coli*.

**Transcription in Eukaryotes** - formation of initiation complex, capping, elongation & termination, RNA processing, RNA editing, major and minor splicing systems,

polyadenylation, Eukaryotic rRNA genes, formation of eukaryotic tRNA molecules, RNA Polymerases of eukaryotes, RNA polymerase II Promoters, Eukaryotic Promoters for RNA polymerase III, Hypersensitive sites, Upstream activation sites and enhancers.

#### **Unit IV: Basics of Life processes II (15L)**

**Translation:** Outline of Translation.

**The Genetic Code:** The Decoding System, Codon -Anticodon interaction.

**Ribosomes:** the special properties of the prokaryotic and eukaryotic ribosomes, ribosome biogenesis.

**Translation process:** initiation, elongation and termination factors of prokaryotes and eukaryotes mechanisms to overcome premature translation termination, role of suppressor tRNAs.

**Inhibitors of protein synthesis:** Prokaryotic and eukaryotic protein synthesis inhibitors and their significance.

#### **PRACTICALS: PSLSCP102**

1. Electron Micrographs of cell organelles; Fluorescent stained histochemically localized cytoskeleton elements.
2. Isolation of chloroplasts from spinach (or any other suitable system) and chlorophyll estimation.
3. Onion root tip squash/ preparation for stages of mitosis.
4. Isolation of RNA from a suitable system and estimation (orcinol reagent).
5. PCR amplification of 16s rRNA.

## **PAPER - PSLSCT103: Biochemistry**

### **Unit I: Protein and Lipids (15L)**

**Protein:** Primary structure elucidation, secondary structure structures eg. Keratin, Collagen, tertiary structure and the underlying interactions/ forces, quaternary structure and with references to haemoglobin, protein folding, domains and motifs, cytoskeletal and extracellular proteins.

**Lipids:** structure, classification and properties of lipids, lipid assembly, model membranes, formation of liposomes and drug targeting.

### **Unit II: Carbohydrates, Vitamins, Minerals (15L)**

**Carbohydrate:** Classification and stereochemistry, structure, properties and biological roles of storage and structural polysaccharides such as, starch, glycogen cellulose, pectin, hemicelluloses, chitin, mucopolysaccharides. Biosynthesis and role of N and O- linked glycoproteins and proteoglycans.

**Vitamins:** Structure and biological roles of water soluble and lipid soluble vitamins.

**Minerals:** Structure and biological roles of bulk and trace elements

### **Unit III: Enzymology (15L)**

**Enzyme:** enzyme and enzyme substrate interactions, chemical modification, and identification of active site amino acids, mechanism of enzyme catalysis with reference to chymotrypsin, lysozymes, metalloenzymes and the role of metals in catalysis with reference to carboxypeptidase.

**Regulation:** regulation of enzyme action, theory of allostery with reference to AT case, Isozymes with reference to LDH: Co-enzymes and their roles, enzyme inhibitors, types and their kinetics, ribozymes and abzymes.

### **Unit IV: Thermodynamics and Electron Transport Chain (15L)**

**Thermodynamics:** The laws of thermodynamics, enthalpy, entropy and free energy concepts and their relevance to biological systems.

**ET:** electron transport chain (ETC) and oxidative/photophosphorylation: structure and function of mitochondrial and chloroplast ETC proteins and light harvesting complex, mechanism of oxidative and photophosphorylation,  $F_0 F_1$  ATPase, theories of ATP synthesis.

### **PRACTICALS: PSLSCP103**

1. Estimation of sugar by DNSA method.
2. Enzyme kinetics, effects of pH, temperature, time and substrate concentration, determination of  $K_m$  and  $V_{max}$  using potato phosphatase/Amylase.
3. Estimation of protein by Folin Lowry
4. Lipid extraction and estimation by Bligh and Dyer method.
5. Estimation of ascorbic acid from vegetable source by colorimetric method.
6. Determination of phosphorous by Fiske-Subbarao method.

## **PAPER - PSLSCT104: Biostatistics and Instrumentation**

### **Unit I: Biostatistics I (15L)**

**Introduction:** Introduction, scope, application and uses of statistics, collection and classification of data, census and sampling, graphs and diagrams, arithmetic mean, median, standard deviation.

**Correlation and regression:** for ungrouped data, scatter diagram, calculation and interraction of correlation coefficient, linear regression coefficient and equation of the lines of regression, non-linear relationship transformable to linear form ( $Y=ab^X$ ,  $Y=a^Xb$ ).

**Probability:** definition, addition and multiplicative laws (without proof). Random variable and its distribution, binomial probability distribution, examples and conditions, means and variance, poisson probability distribution, examples and conditions, means and variance, continuous variable, normal distribution, use of normal probability table for finding probabilities.

**Population Statistics:** Population parameters and sample statistics, sampling techniques, simple random sampling, stratified random sampling, systematic sampling, standard error of mean.

Estimation, point and interval, confidence interval for population, mean and proportion.

### **Unit II: Biostatistics II (15L)**

**Hypothesis testing:** type-1 and typr-2 errors, levels of significance, one tailed and 2 tailed tests, application to single mean and single proportion, equality of two population means and two population proportions.

**Chi-test:** for independent attributes in rxc table, special case 2x2 table.

Students test for significance for correlation, coefficient r for  $P=0$  (small sample tests). Fishers Z transformation coefficient for getting  $rp=0$  in large samples, test of significance for r ( $p=0$ ).

**Design of experiment:** principles and concepts of completely randomised design, randomized block design and Latin square design.

**Variance ratio F tests:** analysis of variance in one way classification.

Non-parametric tests: distribution free methods, sign test for method pairs, Willcoxon test for unpaired data, run test.

### **Unit III: Instrumentation I (15L)**

**pH, Buffers and colorimetry:** Principles and theory, pH meters.

**Colorimetry and spectroscopy:** Basic principles, nature of electromagnetic radiation, Beer- Lambert laws, colorimetric methods and instruments, principles of spectroscopy ,types of spectra- absorbance, emission, fluorescence and action spectra, single and double beam spectrophotometers, densitometers, circular dichroism and their applications.

**Microscopy:** Basic principles, instrumentation, sample preparation for optical, phase-contrast, interference, polarisation, inverted, fluorescence, confocal and electron microscopes and their applications.

**Microtomy:** Principles and types, sample preparation and sectioning parameters.

**Centrifugation:** Principles and types, simple and differential, ultracentrifugation – preparative and analytical.

#### **Unit IV: Instrumentation I (15L)**

**Chromatography:** Principle, methodology and applications of chromatography using (paper, thin layer, column(gel filtration, ion exchange, affinity, gas, HPLC,FPLC etc).

**Electrophoresis:** Principles and types of electrophoresis and their applications for proteins, nucleic acids, including gradient gel and pulse-field gel electrophoresis, gel matrices-polyacrylamide, agarose etc, critical parameters for optimum separation and resolution , two dimensional electrophoresis(IEF).

**X-ray crystallography, Nuclear Magnetic Resonance (NMR) spectra, Magnetic Resonance Imaging (MRI – fMRI) lasers in biology and medicines.**

**Radioisotope methods and tracer techniques in biology:** Basic principles of radioactivity, properties and handling of radioisotopes in biology and medicine, radiation units, Geiger- Muller and scintillation counters, autoradiography, radionucleide imaging, CT Scan and PET scan

**Techniques:** Histology, ELISA, RIA, Immunoprecipitation - single and double, Primers, PCR and its types, RFLP, RAPD, AFLP, Blotting techniques: Southern, Western and Northern, In- situ Hybridization: FISH, GISH SKY, Chromosome Painting

#### **PRACTICALS: PSLSCP104**

1. Preparation of Phosphate, Tris, citrate buffers of various molarity.
2. Determination of lambda max of  $\text{KMnO}_4$ ,  $\text{CoCl}_2$ , methylene blue by spectrophotometer.
3. Verification of Beer-lamberts law by UV Visible spectrophotometer
4. Separation of amino acids by paper chromatography.
5. Separation of lipids by TLC.
6. Solving problems using Students t Test, ANOVA and Regression analysis.

## SEMESTER - II

### PAPER - PSLSCT201: Microbiology, Immunology and Plant Physiology

#### Unit I: Microbiology (15L)

**Microbial diversity:** Bacteria, Archaea and their Outline of classification; Eukaryotic microbes: Yeasts, molds and protozoa; Viruses and their classification; Molecular approaches to microbial taxonomy. Bacteria: Purple and green bacteria, budding bacteria rods, Spirochaetes, Sheathed bacteria, Endospore forming rods and cocci. Archaea: Archaea as earliest life forms; halophiles, Methanogens; Hyperthermophilic archaea and Thermoplasma. Eukarya: Algae, Fungi, Slime molds- General characteristic and types.

**Prokaryotic Cell Structure-** Cell wall, cell membrane synthesis and nucleoid; Flagella and motility; cell inclusions like endospores, gas vesicles.

**Microbial Growth:** Growth curve; Mathematical expression of exponential growth phase; Measurement of growth and growth yields; Synchronous growth; Continuous culture; Effect of environmental factors on growth; diauxic growth.

**Chemotherapy/Antibiotics:** General characteristics of antimicrobial drugs; Antibiotics: Classification, mode of action and resistance; Antifungal and antiviral drugs.

**Host Parasite Interaction:** Recognition, mechanism of microbial pathogenicity and establishment of disease by different pathogens like viruses, bacteria and parasites into animal hosts (one example each). Nosocomial infection; Emerging infectious diseases; alteration of host cell behavior by pathogens.

#### Unit II: Immunology: (15L)

**Lymphatic system,** structure and function of spleen and lymph node.

**Major Histocompatibility Complex I and II** and their importance.

**B cells:** Development, generation of antibody diversity, activation somatic hypermutation and class switch. Primary and secondary immune modulation

**T cells:** Development, TCR diversity, selection and types of T cells and activation.

**The Complement** and its regulation.

**Immune response to infectious diseases:** Viral, Bacterial, Parasitic, AIDS.

**Congenital immunodeficiencies:** SCID.

**Autoimmune diseases** - Myasthenia gravis, Rheumatoid arthritis.

**Applied Immunology:** Monoclonal antibodies, scFv, Chimeric antibodies, bispecific antibodies, phage display, Recombinant and polyvalent vaccines.

### Unit III: Plant Physiology I: (15L)

**The plant Cell wall:** Architecture, composition and biosynthesis.

**Transportation:** Materials through xylem, phloem and plasmodesmata.

**Nitrogen metabolism:** Symbiotic nitrogen fixation, Ammonia and nitrate uptake and metabolism.

**Plant Hormones:** Biosynthesis and biological activity of auxins, cytokinins, gibberellins, Ethylene, Abscissic acid, Salicylates, Jasmonates and Brassinosteroids.

**Sensory Photobiology:** Cryptochromes, phototropins; photoperiodism and biological clocks.

**Plant Development:** Phytochromes and its role in plant development including flowering, germination of pollen and self incompatibility, Double fertilization and seed formation (one typical example of each).

### Unit IV: Plant physiology II: (15L)

**Seed germination:** The hormonal and nutritional aspect of seed germination.

**Root and Shoot:** Development, organization of root and shoot apical meristems.

**Leaf: Development** and phyllotaxy, stomatal movement.

**Floral development:** Examples *Arabidopsis* and *Antirrhinum*.

**Programmed Cell Death and Senescence in plants:** Concept, effect on pigments in the plants, environmental factors and hormonal factors.

**Stress response:** Plant response to abiotic stress- Water, salt and temperature.

**Response and resistance to biotic stress** (viral, fungal and insects): Host recognition and establishment of disease, overview of plant defense methods (anatomical, secondary metabolites, hypersensitive reactions, hormonal signals and the *R - avr* system).

### PRACTICALS: PSLSCP201

1. Diauxic and growth curve.
2. Antimicrobial activity by agar cup/ disc method.
3. Sandwich ELISA. (Demonstration)
4. Semi-quantitative Mancini test.
5. Antigen preparation and sterility testing
6. Iso agglutination and heme agglutination test
7. Widal test: Dryer's test
8. Proline content in normal and saline stressed plants.

9. Effect of Salinity on seed viability.
10. Estimation of Indole Acetic Acid.
11. Study of the organization of apical meristems: root and shoot.
12. Examples of phyllotaxy: spiral, opposite decussate, whorled.
13. Flower aestivation: valvate, imbricate, twisted and pappilionaceous type.

## **PAPER - PLS SCT202: Molecular Biology and Cell signaling.**

### **Unit 1: DNA replication, repair and recombination: (15L)**

**DNA replication:** Unit of replication and enzymes, replication origin and replication fork, fidelity and processivity of replication, extrachromosomal replicons (plasmid).

**DNA repair:** Direct repair, Excision of base pair, Post replicative, SOS.

**Recombination:** Homologous and Non Homologous.

### **Unit 2: Gene and Epigenetics: (15L)**

**Structure of Gene:** Monocistronic and Polycistronic, Promoter, Operator, ORF, Terminator, Gene families, Pseudogenes, Split Gene.

**Other elements of Eukaryotic Genome:** Satellite DNA, Tandem repeat array, Transposons: LINE and SINE.

**Genomic Mutations:** Introduction, Deletions, Addition, Insertion, Inversions and Translocations.

**Chromatin Structure:** Histones, Non-Histones, Scaffolding proteins.

**Epigenetics:** Hypothesis, Imprinting, Mechanism (Methylation and Acetylation), Cancer genetics, Anticipation, Penetrance and Expressivity.

### **Unit 3: Gene Expression Regulation: (15L)**

**Regulation of Gene expression in Prokaryotes:** General aspects of Regulation, transcriptional regulation - inducible and repressible system, positive regulation and negative regulation; Operon concept – lac, trp, Ara operons, the galactose operon, relative positions of Promoters and Operators, Regulons, Master switches, Regulation of Translation, Regulation of the synthesis of Ribosomes, Unregulated changes in gene expression, Feedback Inhibition, RNA interference, mRNA half-life, riboswitches, ribozymes.

**Gene expression in Eukaryotes:** Regulatory strategies in Eukaryotes, Transcriptional Control by hormones, signalling factors and environmental factors, Role of transcription factors, enhancers, silencers, chromatin remodelling in regulation of gene expression, role of post-translational modifications in transcription initiation, Regulation of processing, Regulation through RNA splicing, RNA degradation and RNA interference, Translational control, Regulation of gene expression in plant cells by light. Diseases associated with defects in regulation.

## Unit 4: Cell communication and signalling: (15L)

**Concept** of cell surface receptors, second messengers and regulation of the signalling pathway.

**Signalling pathways:** (a). Receptor tyrosine kinases (RTK): EGF signalling leading to cell division. (b). JAK-STAT pathway. (c). G protein coupled receptors. (d). Bacteriorhodopsin signalling. (e). Toll-like receptors (in immunology).

**Two component signalling:** (a). Bacterial – chemotaxis, quorum sensing. (b). Plant two component signalling.

**Extracellular matrix:** Fibres, cell adhesion molecules and their functions, gap junctions.

**Cancer:** As an aberration of the cell cycle; oncogenes, virus induced cell transformation, metastasis and treatment.

**Cell Death:** Apoptosis signalling pathways, effects of aberrant apoptosis.

## PRACTICALS: PSLSCP 202

1. Isolation of plasmid from *E. coli*.
2. Induction of the Lac operon and assessment of enzyme activity using a suitable system (e.g. *E. coli*).
3. Isolation of histone from yeast cells.
4. FISH (Demonstration).
5. Assessment of signalling pathways (PKC, IP<sub>3</sub> and Calcium) in the regulation of nitrate assimilation in plants/ bacteria.

## **PAPER - PSLSC203: Animal Science**

### **Unit I: Animal Physiology (15L)**

**Blood:** Blood corpuscles, haemopoiesis and formed elements, plasma function, blood volume, blood volume regulation, blood groups, haemoglobin, immunity, haemostasis.

**Cardiovascular System:** Comparative anatomy of heart structure, cardiac cycle, blood pressure, neural and chemical regulation.

**Physiological Systems:** Respiratory system, Digestive system, Excretory system

**Thermoregulation:** Comfort zone, body temperature – physical, chemical, neural regulation, acclimatization.

**Osmoregulation, Stress and adaptation**

### **Unit II: Developmental biology (15L)**

**Concepts of development:** Brief history of developmental biology, Potency, commitment, specification, induction, competence, determination and differentiation;

**Gametogenesis, fertilization and early development:** Production of gametes, cell surface molecules in sperm-egg recognition in animals; zygote formation, cleavage, blastula formation, embryonic fields, gastrulation and formation of germ layers in animals

**Morphogenesis and organogenesis:** axes and pattern formation in *Drosophila*; Vertebrate eye lens induction; limb development and regeneration in vertebrates; Differentiation of neurons; metamorphosis;

### **Unit III: Neurobiology (15L)**

**Overview:** central nervous system (CNS) and peripheral nervous system (PNS)- structure, organization and function

**Cellular perspective:** types of cells and function

**Impulse generation and conduction of nerve impulse**

**Synaptic transmission:** Electrical and Chemical with examples of two neurotransmitters and their receptors; cAMP as messenger, Neuromuscular junctions

**Sensory systems:** Visual, Auditory, Chemosensory, Somatosensory

**Motor systems**

**Behavior**– Associative and non-associative

#### **Unit IV: Endocrinology (15L)**

**Endocrine system:** Structure and functions of Endocrine glands, Structure, biological roles and mechanism of actions of hormones (protein, glycoprotein and steroid hormones).

#### **PRACTICALS: PSLSCP203**

1. Mounting of cornea and statocyst of prawn.
2. Chick embryology- Fresh Mounting.
3. Neutral red staining for apoptosis in developing chick embryo.
4. Permanent slides of different stages of chick embryo.
5. Microtomy- sections of chick liver and histopathological study.
6. Permanent slides of tissues.
7. Study of ECG in humans.
8. Study of EEG in humans.

- Text Book of Biochemistry and Human Biology: Talwar and Srivastava ( 3<sup>rd</sup> Edison)
- Developmental Biology: Mohan and Arora.

## **PAPER - PSLSCT204: Bioinformatics, IPR and Bioethics**

### **Unit I: Bioinformatics (15L)**

**Introduction to Bioinformatics:** Definition and History of Bioinformatics, Different Omics and its application and Current status.

**Computers and Internet:** Operating systems, Internet and its components, Internet sources for Bioinformatics, Flat file.

**Introduction to Data Mining:** Types of Data, Data mining and warehousing, Knowledge discovery in databases

**Biological databases:** Primary DNA and Protein Databases, Secondary Protein Databases, Secondary Composite Structure Databases, Protein Databank (PDB), Metabolism Database (KEGG).

### **Unit II: Alignment problem and solutions (15L)**

**Multiple Sequence Alignment (MSA):** Definition, Objective, Consensus, Methods for MSA: Heuristic approach, Dynamic programming approach and their combinations.

**Pairwise Alignment:** Introduction, PAM Matrix, BLOSUM Matrix, The Dot Plot, Global alignment, Local alignment, FastA and BLAST. Statistics: P and E value.

**Phylogenetic Analysis:** Molecular-Phylogenetics, Phylogenetic-trees, Terminology of tree-reconstruction, rooted and un-rooted trees, gene vs species trees and their properties, Methods: UPGMA, Neighbor-Joining Method, Maximum Parsimony.

### **Unit III: Genomics and Proteomics (15L)**

**Genomics:** Basic concepts on identification of disease genes, role of bioinformatics-OMIM database, reference genome sequence, integrated genomic maps, gene expression profiling; identification of SNPs, SNP database (DbSNP). Role of SNP in Pharmacogenomics, SNP arrays.

**Proteomics:** Introduction and current status, Prediction of secondary structure: PHD and PSI-PRED method. Tertiary (3-D) Structure prediction: Fundamentals of the methods for 3D structure prediction (sequence similarity/identity of target proteins of known structure, fundamental principles of protein folding etc.) Homology Modeling, fold recognition, threading approaches, and ab-initio structure prediction methods. Application in drug designing: Drug targets, Lead Identification and Modification, Computer-Aided Drug Design.

#### **Unit IV: IPR and Bioethics (15L)**

**IPR:** Introduction to IPR; Types of Intellectual property – Patents, Trademarks, 12 Copyrights and related rights; Traditional vs. Novelty; Importance of intellectual property rights in the modern global economic environment, Importance of intellectual property rights in India; IPR and its relevance in biology and environmental sciences; Case studies and agreements - Evolution of GATT and WTO and IPR provisions under TRIPS; Madrid agreement; Hague agreement; WIPO treaties; Budapest treaty; Indian Patent Act (1970).

**Patents:** Definition, patentable and non-patentable inventions; types of patent application – Ordinary, Conventional, PCT, Divisional, and Patent of addition; Concept of Prior Art; Precautions while patenting - disclosure / non- disclosure; Time frame and cost; Patent databases, Searching International databases; Patent licensing and agreement; Patent infringement – meaning, scope, litigation, case studies.

**Bioethics:** Definition – moral, values, ethics and ethics in biology; Role and importance of ethics in biology; Basic Approaches to Ethics, Bioethics: legal and regulatory issues; Bioethics in healthcare, agriculture, modern biology, biotechnology, animal welfare & right / animals in research, wildlife conservation and management, commercialism in scientific research, Past and Present ‘Bioethical Conflicts’ in Biotechnology- Interference with Nature , Fear of Unknown, Regulatory Concerns, Human Misuse Future ‘Bioethical Conflicts’ in Biotechnology - Changing perception of Nature, Human Genetic Engineering, GMOs.

#### **PRACTICALS: PSLSCP204**

1. Multiple sequence alignment and Phylogenetic tree analysis
2. BLAST- BLASTn, BLASTp, primer BLAST.
3. Motif Finding- MEME and myhits
4. Secondary Structure Prediction: Interproscan
5. CATH and SCOP
6. KEGG
7. Tertiary Structure: PDB, Rasmol
8. Homology Modeling – SWISS-MODEL

#### **References:**

- Introduction to Bioinformatics- Attwood, Parry-Smith and Phukan
- Bioinformatics: Sequence and Genome Analysis- David W. Mount

- Bioinformatics and Functional Genomics- Jonathan Pevsner
- Fundamentals of Bioinformatics: Harisha S.
- Bioinformatics and Molecular Evolution: Higgs & Attwood
- Bioinformatics: Harshwardhan Pal
- Law Of Intellectual Property Rights-Shiv Sahai Singh
- WTO And Intellectual Property Rights-Talwar Sabanna
- IPR: Unleashing the Knowledge Economy- Prabuddha Ganguli

## OVERALL EXAMINATION AND MARKS DISTRIBUTION PATTERN

### SEMESTER I

	COURSE CODE												
Theory	PSLSCT101			PSLSCT102			PSLSCT103			PSLSCT104			GRAND TOTAL
	Internal	External	Total	Internal	External	Total	Internal	External	Total	Internal	External	Total	
	40	60	100	40	60	100	40	60	100	40	60	100	400
Practicals	PSLSACP101			PSLSACP102			PSLSACP103			PSLSACP104			
	-	50	50	-	50	50	-	50	50	-	50	50	200

### SEMESTER II

	COURSE CODE					
Theory	PSLSCT201	PSLSCT202	PSLSCT203	PSLSCT204	GRAND TOTAL	

	Internal	External	Total	Internal	External	Total	Internal	External	Total	Internal	External	Total	
	40	60	100	40	60	100	40	60	100	40	60	100	400
<b>Practicals</b>	<b>PSLSCP201</b>			<b>PSLSCP202</b>			<b>PSLSCP203</b>			<b>PSLSCP204</b>			
	-	50	50	-	50	50	-	50	50	-	50	50	200
