| Q.1   |     | Choose correct alternative in each of the following: |  |
|-------|-----|--|--|
| i.    | (b) |  |  |
| ii.   | (d) |  |  |
| iii.  | (a) |  |  |
| iv.   | (d) |  |  |
| v.    | (a) |  |  |
| vi.   | (c) |  |  |
| vii.  | (c) |  |  |
| viii. | (b) |  |  |
| ix.   | (c) |  |  |
| x.    | (b) |  |  |
| Q.2   |     | Attempt any ONE question from the following:         |  |
| a)    |     |  |  |
| i.    |     |  |  |
| Ans   |     |  |  |
| ii.   |     |  |  |
| Ans   |     |  |  |
| b)    |     | Attempt any TWO questions from the following:        |  |
| i.    |     |  |  |

- 4-1 i)  $b = 1, 2, 0, 1, 2, 0, \dots$
- ii)  $d = \frac{1}{7}$     iii)  $a = \frac{2}{3}$     iv)  $a = \text{closed}$ .

②

q.2.a.i)  $\forall$  Every bdd sequence  $a$  in  $\mathbb{R}$  has a cgt subsequence.

f: Let  $(x_n)$  be a bdd seq in  $\mathbb{R}$

$x: \mathbb{N} \rightarrow \mathbb{R}, (x_n) \Rightarrow x(n) = x_n \in \mathbb{R}$

Range: Image of seq. =  $x(\mathbb{N}) = \{x_n / n \in \mathbb{N}\} \subset \mathbb{R}$

e) If  $\{x_n / n \in \mathbb{N}\}$  is a finite set then

$\exists$  a real number  $\alpha$

s.t.  $x_n = \alpha$  for infinitely many  $n \in \mathbb{N}$

Say for all  $k \in S \subset \mathbb{N}, x_k = \alpha, k \in S$

Using well ordering principle  $S \subset \mathbb{N}$

has least element  $n_1$  & we can

construct  $n_1 < n_2 < \dots < n_k < \dots$

increasing seq of natural nos in  $S$

s.t.  $x_{n_k} = \alpha$

Thus  $(x_{n_k})$  is a subseq. of  $(x_n)$

which is constant  $\therefore$  cgt subseq

$\therefore$  Given bdd seq  $(x_n)$  has cgt subseq.  $(x_{n_k})$

$\therefore$  B.W. th<sup>m</sup> is proved in this case.

case 2): Range is not finite set.

i.e.  $x(\mathbb{N}) = \{x_n / n \in \mathbb{N}\}$  is a infinite set

As  $(x_n)$  is a bdd seq in  $\mathbb{R}, \exists M > 0$

s.t.  $|x_n| \leq M, \forall n \in \mathbb{N}$

$-M \leq x_n \leq M, \forall n \in \mathbb{N}$

$\therefore x_n \in [-M, M], \forall n \in \mathbb{N}$

Let  $J_0 = [-M, M]$

Bisect  $J_0$  into two subintervals

$[-M, 0]$  &  $[0, M]$

3

q.2.a.ii

Let  $f: [a, b] \rightarrow \mathbb{R}$  be continuous. &  
Suppose  $f$  has opposite signs at end pts.  
Say  $f(a) < 0$  &  $f(b) > 0$ , then  $\exists c \in (a, b)$   
s.t.  $f(c) = 0$

Let  $J_0 = [a, b]$ ,  $f: [a, b] \rightarrow \mathbb{R}$  cont. on  
 $[a, b]$ .

using,  $f(a) < 0$  &  $f(b) > 0$

Let  $c_1 = \frac{a+b}{2}$ , midpt of  $J_0$

$\therefore f(c_1)$  is '0' or +ve or -ve.

④ If  $f(c_1) = 0$ , nothing to prove.

⑤ If not, then bisect  $J_0$   
 $[a, c_1]$  &  $[c_1, b]$  are two subintervals  
of  $J_0$ . choose one of these so that  $f$  has  
opposite signs at end pt.

for eg. if  $f(c_1) < 0$  we choose  
 $[c_1, b]$

if  $f(c_1) > 0$  we choose  $[a, c_1]$

The chosen interval is called

$$J_1 = [a_1, b_1]$$

note  $f$  has opp. signs at end pts of  
 $J_1$ .

Now bisect  $J_1$  choose one of subinterval  
 $J_2 = [a_2, b_2]$  so that  $f$  takes value  
with opp. signs at end pts & proceed sim.

Thus we obtain seq  $\{J_n\}$  of closed  
subintervals s.t

I)  $J_n = [a_n, b_n]$ , then  $f(a_n) < 0$  &  
 $f(b_n) > 0$

II)  $J_n \supseteq J_{n+1}, \forall n \in \mathbb{N}$

III)  $l(J_n) = (b-a)/2^n = b_n - a_n$

By nested interval th<sup>m</sup>  $\bigcap_{n \in \mathbb{N}} J_n \neq \emptyset$

&  $l(J_n) \rightarrow 0$  as  $n \rightarrow \infty$

$\therefore \bigcap_{n \in \mathbb{N}} J_n = \{c\} = \text{singleton set}$

claim:  $f(c) = 0$

$c \in J_n \forall n \in \mathbb{N}$ .

$\Rightarrow c \in [a_n, b_n], \forall n \in \mathbb{N}$

$$|c - a_n| \leq \frac{b-a}{2^n} \quad \forall n \in \mathbb{N}$$

$$\Rightarrow c \in [a_n, b_n] \quad \forall n$$

5

$$0 \leq \lim_{n \rightarrow \infty} |c - a_n| \leq 0$$

$$\therefore \lim_{n \rightarrow \infty} a_n = c \quad \text{by sandwich th}^m$$

$$\lim_{n \rightarrow \infty} |c - b_n| \leq \frac{b-a}{2^n} \quad \forall n \in \mathbb{N}$$

$$\therefore \lim_{n \rightarrow \infty} b_n = c$$

As  $c \in [a, b] \Rightarrow f$  is cont. at  $c$ .

$\therefore$  By cont. of  $f$  at  $c$ ,

$$c_n \rightarrow c \Rightarrow f(c_n) \rightarrow f(c)$$

$$\text{But } f(a_n) \leq 0, f(b_n) \geq 0, \forall n \in \mathbb{N}$$

$$\Rightarrow f(c) \leq 0, \& f(c) \geq 0$$

$$\therefore f(c) = 0$$

$$\therefore \exists c \in (a, b) \text{ s.t. } f(c) = 0$$

In particular if  $f: [a, b] \rightarrow \mathbb{R}$  cont. on  $[a, b]$

& if  $r \in \mathbb{R}$  s.t.  $f(a) < r < f(b)$  then

$$\exists x_0 \in (a, b)$$

$$\text{s.t. } f(x_0) = r$$

Define  $g(x) = f(x) - r$ ,  $g$  is cont. as  $f$  is

Apply previous prop. as  $g(a) < 0$  &  $g(b) > 0$

$$\exists c \in (a, b) \text{ s.t. } g(c) = 0$$

$$\Rightarrow f(c) = r$$

az bi

$F_n \subseteq \mathbb{R}, n \in \mathbb{N}$

$F_n = [n, \infty)$  is a closed set.

$[F_n = (-\infty, n)]$  opt. compl<sup>i</sup> of  $\uparrow$ .

$F_n \supseteq F_{n+1}, \forall n \in \mathbb{N}$

$\lambda(F_n) \rightarrow 0$  as  $n \rightarrow \infty$

Nested interval th<sup>m</sup> can't be applicable

Let  $x \in \mathbb{R}$

s.t.  $x \in \cap F_n$

$x \in [n, \infty), \forall n \in \mathbb{N}$

$\Rightarrow n \leq x, \forall n \in \mathbb{N}$

$\Rightarrow x$  is upper of  $\mathbb{N}$

A contradiction  $\forall x \in \mathbb{R}$

s.t.  $x \in \cap F_n$

$F_1 \subseteq F_2 \subseteq F_3 \subseteq \dots$

$F_n \not\subseteq F_{n+1}, \cap F_n = \emptyset$  in this case  $n \in \mathbb{N}$

~~$F_n = (-n, n)$~~

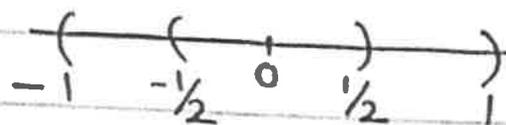

7

$$F_n = \left[ -\frac{1}{n}, \frac{1}{n} \right]$$

$F_n$ 's are closed interval

$$F_1 = [-1, 1] = [-1, 1], F_2 = \left[ -\frac{1}{2}, \frac{1}{2} \right]$$

$F_n$ 's are closed &  $F_1 \supseteq F_2 \supseteq F_3 \supseteq \dots$

  $F_n$ 's are nested.

$$l(F_n) \rightarrow 0 \quad , \quad 2/n \rightarrow \left( \frac{1}{n} - \left( -\frac{1}{n} \right) \right) = \frac{1}{n} + \frac{1}{n}$$

$$l(F_n) \rightarrow 0 \quad \text{as } n \rightarrow \infty$$

Nested interval th<sup>m</sup> can be satisfied.

$$F_n \supseteq F_{n+1}$$

$\bigcap_{n=1}^{\infty} F_n$  is a singleton set

Note  $0 \in F_n \quad \forall n \in \mathbb{N}$

$$\bigcap_{n \in \mathbb{N}} F_n = \{0\}$$

Q 2. (b) (iii) Given for any  $x \in I$ ,  $\exists y \in I$  s.t.

$$|f(y)| \leq \frac{1}{2} |f(x)| \quad \text{--- *}$$

(8)

We construct a sequence as follows:

Choose any  $x_1 \in I$

$$\text{By * } \exists y = x_2 \in I \text{ s.t. } |f(x_2)| \leq \frac{1}{2} |f(x_1)|$$

Similarly for  $x = x_2$ ,  $\exists y = x_3$  s.t.

$$|f(x_3)| \leq \frac{1}{2} |f(x_2)|$$

$$\therefore |f(x_3)| \leq \frac{1}{2^2} |f(x_1)|$$

Proceeding similarly we ~~get~~ get  $x_n$

$$\text{s.t. } |f(x_n)| \leq \frac{1}{2} |f(x_{n-1})| \leq \dots \leq \frac{1}{2^n} |f(x_1)|$$

$$\therefore \lim_{n \rightarrow \infty} |f(x_n)| \leq \lim_{n \rightarrow \infty} \frac{1}{2^n} |f(x_1)|$$

$$\leq |f(x_1)| \times 0 = 0$$

$$\therefore |f(x_n)| \geq 0,$$

$$\therefore \lim_{n \rightarrow \infty} |f(x_n)| = 0 \quad \text{--- (*)}$$

$\therefore x_n \in I, \forall n$   $\therefore (x_n)$  is a bounded sequence.

$\therefore$  By Bolzano-Weierstrass th<sup>m</sup> for sequences  
 $\exists$  a convergent subsequence say  $(x_{n_k}) \rightarrow c$

$\therefore f$  is conti. on  $I$ , by sequential conti.

$$(f(x_{n_k})) \rightarrow f(c).$$

$$\text{By (*), } \lim_{k \rightarrow \infty} f(x_{n_k}) = 0 \quad \therefore f(c) = 0$$

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author details the various methods used to collect and analyze the data. This includes both manual and automated processes. The goal is to ensure that the information gathered is both reliable and comprehensive.

The third part of the document focuses on the results of the analysis. It shows that there are significant trends in the data, particularly in the areas of customer behavior and market performance. These findings are crucial for making informed business decisions.

Finally, the document concludes with a series of recommendations for future work. It suggests that further research should be conducted to explore the underlying causes of the observed trends. Additionally, it recommends implementing new strategies to optimize performance and increase efficiency.

$$L(P, f) = \sum_{k=1}^n m_k(x_k - x_{k-1}) = 8.8 \quad U(P, f) = \sum_{k=1}^n M_k(x_k - x_{k-1}) = 9.2 \quad 2M$$

$$\text{Therefore } L(P, f) \leq U(P, f) \quad 1M$$

iii.

$$\text{Let } f : [-1, 1] \rightarrow \mathbb{R} \text{ defined by } f(x) = x \quad \text{if } x \in [-1, 1] \cap \mathbb{Q}$$

$$= 0 \quad \text{if } x \in [-1, 1] \setminus \mathbb{Q}$$

Check whether  $f$  is Riemann integrable.

Ans

Divide the interval  $[-1, 1]$  into  $2n$  equal parts each of length  $\frac{1-(-1)}{2n} = \frac{1}{n}$

$$\text{Let } P = \left\{ -1, -1 + \frac{1}{n}, -1 + \frac{2}{n}, \dots, -1 + \frac{n-1}{n}, 0, \frac{1}{n}, \frac{2}{n}, \dots, \frac{n-1}{n}, 1 \right\}$$

Let  $m_k$  and  $M_k$ ,  $k = 1$  to  $n$  be infimum and supremum of  $f$  respectively on  $\left[-1, -1 + \frac{1}{n}\right]$ ,  $\left[-1 + \frac{1}{n}, -1 + \frac{2}{n}\right], \dots, \left[-1 + \frac{n-1}{n}, 0\right]$ .

$$\Rightarrow m_1 = -1, m_k = -1 + \frac{k-1}{n}, k = 2 \text{ to } n \quad \text{and} \quad M_k = 0, k = 1 \text{ to } n \quad 1M$$

Let  $m'_k$  and  $M'_k$ ,  $k = 1$  to  $n$  be infimum and supremum of  $f$  respectively on  $\left[0, \frac{1}{n}\right]$ ,

$$\left[\frac{1}{n}, \frac{2}{n}\right], \dots, \left[\frac{n-1}{n}, 1\right] \Rightarrow m'_k = 0, M'_k = k/n, i = 1 \text{ to } n \quad 1M$$

$$L(P, f) = \sum_{k=1}^n (m_k + m'_k)(x_k - x_{k-1}) = \frac{1}{n} \left[ -1 + \left(-1 + \frac{1}{n}\right) + \dots + \left(-1 + \frac{n-1}{n}\right) + 0 + \dots + 0 \right]$$

$$= \frac{-1}{n^2} [n + (n-1) + \dots + 2 + 1] = -\frac{1}{2} \left(1 + \frac{1}{n}\right) \Rightarrow L(f) = -\frac{1}{2} \quad 2M$$

$$U(P, f) = \sum_{k=1}^n (M_k + M'_k)(x_k - x_{k-1}) = \frac{1}{n} \left[ 0 + \dots + 0 + \frac{1}{n} + \frac{2}{n} + \dots + \frac{n}{n} \right]$$

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author details the various methods used to collect and analyze the data. This includes both manual and automated processes. The goal is to ensure that the data is as accurate and reliable as possible.

The third part of the document focuses on the results of the analysis. It shows that there is a clear trend in the data, which is consistent with the initial hypothesis. This finding is significant as it provides strong evidence for the proposed model.

Finally, the document concludes with a summary of the findings and a list of recommendations for future research. It suggests that further studies should be conducted to explore the underlying causes of the observed trends.

The first part of the paper is devoted to the study of the asymptotic behavior of the solutions of the system (1) as  $t \rightarrow \infty$ . It is shown that the solutions of the system (1) tend to zero as  $t \rightarrow \infty$  if and only if the matrix  $A$  is stable.

In the second part of the paper, the asymptotic behavior of the solutions of the system (1) is studied for the case when the matrix  $A$  is not stable.

It is shown that the solutions of the system (1) tend to zero as  $t \rightarrow \infty$  if and only if the matrix  $A$  is stable.

In the third part of the paper, the asymptotic behavior of the solutions of the system (1) is studied for the case when the matrix  $A$  is not stable.

It is shown that the solutions of the system (1) tend to zero as  $t \rightarrow \infty$  if and only if the matrix  $A$  is stable.

In the fourth part of the paper, the asymptotic behavior of the solutions of the system (1) is studied for the case when the matrix  $A$  is not stable.

It is shown that the solutions of the system (1) tend to zero as  $t \rightarrow \infty$  if and only if the matrix  $A$  is stable.

In the fifth part of the paper, the asymptotic behavior of the solutions of the system (1) is studied for the case when the matrix  $A$  is not stable.

It is shown that the solutions of the system (1) tend to zero as  $t \rightarrow \infty$  if and only if the matrix  $A$  is stable.

In the sixth part of the paper, the asymptotic behavior of the solutions of the system (1) is studied for the case when the matrix  $A$  is not stable.

It is shown that the solutions of the system (1) tend to zero as  $t \rightarrow \infty$  if and only if the matrix  $A$  is stable.

In the seventh part of the paper, the asymptotic behavior of the solutions of the system (1) is studied for the case when the matrix  $A$  is not stable.

It is shown that the solutions of the system (1) tend to zero as  $t \rightarrow \infty$  if and only if the matrix  $A$  is stable.

In the eighth part of the paper, the asymptotic behavior of the solutions of the system (1) is studied for the case when the matrix  $A$  is not stable.

It is shown that the solutions of the system (1) tend to zero as  $t \rightarrow \infty$  if and only if the matrix  $A$  is stable.

In the ninth part of the paper, the asymptotic behavior of the solutions of the system (1) is studied for the case when the matrix  $A$  is not stable.

It is shown that the solutions of the system (1) tend to zero as  $t \rightarrow \infty$  if and only if the matrix  $A$  is stable.
