QUESTION PAPER SOLUTION

T.E SEM VI BIOMEDICAL ENGG.

SUB: BIOLOGICAL MODELING AND SIMULATION

EXAM : May' 18 ()

- | 1 | (a) Explain with a neat diagram model of a circulatory system
Diagram of circulatory system
Electrical equivalent
Explanation. | 05
01
02
02 | | | | | | | | | | | | |
|---------------------|--|----------------------|--------------|---------|---------------|--------|----------|-----------------|-------|-------------------|-----------------------------|---------------------|---------------------|----------------------------------|
| | (b) Explain the significance of ion pump
1. Distribution of charges across the membrane
2. Membrane potential
3. Working of ion pump | 05
01
02
02 | | | | | | | | | | | | |
| | (c) Differentiate between spindle receptor and golgi tendon organ
<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%;">Spindle receptor</td> <td style="width: 50%; text-align: center;">Golgi tendon</td> </tr> <tr> <td>Diagram</td> <td></td> </tr> <tr> <td>series</td> <td style="text-align: center;">parallel</td> </tr> <tr> <td>monitors length</td> <td style="text-align: center;">force</td> </tr> <tr> <td>belly of a muscle</td> <td style="text-align: center;">between muscle and the bone</td> </tr> <tr> <td>excitatory response</td> <td style="text-align: center;">Inhibitory response</td> </tr> </table> | Spindle receptor | Golgi tendon | Diagram | | series | parallel | monitors length | force | belly of a muscle | between muscle and the bone | excitatory response | Inhibitory response | 05

| Spindle receptor | Golgi tendon | | | | | | | | | | | | | |
| Diagram | | | | | | | | | | | | | | |
| series | parallel | | | | | | | | | | | | | |
| monitors length | force | | | | | | | | | | | | | |
| belly of a muscle | between muscle and the bone | | | | | | | | | | | | | |
| excitatory response | Inhibitory response | | | | | | | | | | | | | |
| | (d) Explain different heat generating and heat loosing mechanism in a body
Conduction, convection, evaporation Shivering, exercise, vasoconstriction, vasodilation, Role of hormones | 05 | | | | | | | | | | | | |
| 2 | (a) Using biophysics tools derive Donnan's equilibrium for a membrane permeable to Ca^{2+} and Cl^- ions.
1. Biophysics tools
2. Equilibrium condition
3. Statement of Donnan Equilibrium. | 10 | | | | | | | | | | | | |
| | (b) Extracellular and Intracellular concentrations of Na^+ , K^+ and Cl^- are as given $T=20^\circ\text{C}$. | 10 | | | | | | | | | | | | |
| | <table> <thead> <tr> <th></th> <th style="text-align: center;">ECF</th> <th style="text-align: center;">ICF</th> </tr> </thead> <tbody> <tr> <td>Na^+</td> <td style="text-align: center;">230 mM</td> <td style="text-align: center;">25 mM</td> </tr> <tr> <td>K^+</td> <td style="text-align: center;">30 mM</td> <td style="text-align: center;">800 mM</td> </tr> <tr> <td>Cl^-</td> <td style="text-align: center;">1090 mM</td> <td style="text-align: center;">72 mM</td> </tr> </tbody> </table> | | ECF | ICF | Na^+ | 230 mM | 25 mM | K^+ | 30 mM | 800 mM | Cl^- | 1090 mM | 72 mM | |
| | ECF | ICF | | | | | | | | | | | | |
| Na^+ | 230 mM | 25 mM | | | | | | | | | | | | |
| K^+ | 30 mM | 800 mM | | | | | | | | | | | | |
| Cl^- | 1090 mM | 72 mM | | | | | | | | | | | | |
| | i) Determine the equilibrium potentials for Na^+ , K^+ and Cl^- . | | | | | | | | | | | | | |

		Results
		Experimental set up
	5	iii) force-velocity relationship Discussion
	5	Results Experimental set up i) series elasticity
(a)	10	With reference to reciprocal innervation model of eye movement explain, ii) series elasticity
	6	Plant model of a thermoregulatory system : explanation
	4	Plant model of a thermoregulatory system : diagram
(b)	10	Explain the plant model of thermoregulatory system
	03	3. Role of antagonist muscle and block diagram
	04	2. Explanation
	03	1. Stretch reflex
(a)	10	Explain stretch reflex with a neat block diagram. Also explain the role of antagonist muscle in neuromuscular system.
	02	Graphs
	02	Block diagram
	04	Components of the model
	02	Physiology of immune system
(b)	10	Explain with necessary equation linearized model of immune system
	05	Definition, description, example diagram
	05	(ii) Lumped parameter and distributed parameter model
	05	Definition, description, example diagram
	10	(i) Compartmental and Non-compartmental modelling
3	(a)	Differentiate with suitable example,
	10	iii) If $P_K = 1$; $P_{Na} = 0.019$ and $P_C = 0.381$, calculate membrane potential.

$$= -19.86 \text{ mV}$$

$$V_m = -\frac{RT}{4F} \ln \left[\frac{P_K [K^+]_o + P_{Na} [Na^+]_o + P_C [C^+]_o}{P_K [K^+]_i + P_{Na} [Na^+]_i + P_C [C^+]_i} \right]$$

$$E_K = -\frac{RT}{4F} \ln \left[\frac{[K^+]_o}{[K^+]_i} \right] = -82.48 \text{ mV}; E_{Na} = 56.08 \text{ mV} E_C = -68.66 \text{ mV}$$

Discussion

	(b) Draw the electrical model of a membrane and explain the significance of each component	10
	Diagram	04
	Explanation	06
	With reference to the Westheimer's eye movement model,	20
6	i) find the expression for displacement	06

Derivation to find

$$\theta(t) = \frac{1}{K} \left[1 - \frac{e^{-\frac{\omega_n t}{\sqrt{1-\epsilon_1^2}}}}{\sqrt{1-\epsilon_1^2}} \sin(\omega_n t + \phi) \right]$$

ii) find the time to peak and maximum displacement

06

Derivation to find $t_p = \frac{\pi}{\omega_n \sqrt{1-\epsilon_1^2}}$

$$\theta_{max} = \frac{1}{K} \left[1 + e^{-\frac{\pi}{\omega_n \sqrt{1-\epsilon_1^2}}} \right]$$

iii) find the time to peak velocity and peak velocity

08

Derivation to find

$$t_{pv} = \frac{\phi}{\omega_n \sqrt{1-\epsilon_1^2}}$$

$$\left(\frac{d\theta}{dt} \right)_{max} = \frac{\omega_n e^{-\phi/\tan\phi}}{K \sqrt{1-\epsilon_1^2}} \cdot \sin\phi$$
