# **UNIVERSITY OF MUMBAI** No. UG/176 of 2016-17

### **CIRCULAR:-**

A reference is invited to the Syllabi relating to the B.Sc. degree course , vide this office Circular No. UG/177 of 2011, dated 20th June, 2011 and the Principals of affiliated Colleges in Arts, Science and Commerce are hereby informed that the recommendation made by the Ad-hoc Board of Studies in Information Technology at its meeting held on 4<sup>th</sup> July, 2016 has been accepted by the Academic Council at its meeting held on 14<sup>th</sup> July, 2016 vide item No. 4.76 and that in accordance therewith, the revised syllabus as per the Choice Based Credit System for F.Y. B.Sc. programme in Information Technology (Sem. I & II), which is available on the University's web site (www.mu.ac.in) and that the same has been brought into force with effect from the academic year 2016-17.

MUMBAI - 400 032 22 November, 2016

To,

The Principals of the affiliated Colleges in Arts, Science and Commerce. A.C/4.76/14.07.2016

#### Preamble

The B.Sc. Information Technology programme was started in 2001 with an aim to make the students employable and impart industry oriented training. The main objectives of the course are:

- to think analytically, creatively and critically in developing robust, extensible and highly maintainable technological solutions to simple and complex problems.
- to apply their knowledge and skills to be employed and excel in IT professional careers and/or to continue their education in IT and/or related post graduate programmes.
- to be capable of managing complex IT projects with consideration of the human, financial and environmental factors.
- to work effectively as a part of a team to achieve a common stated goal.
- to adhere to the highest standards of ethics, including relevant industry and organizational codes of conduct.
- to communicate effectively with a range of audiences both technical and non-technical.
- to develop an aptitude to engage in continuing professional development.

The new syllabus is aimed to achieve the objectives. The syllabus spanning three years covers the industry relevant courses. The students will be ready for the jobs available in different fields like:

- Software Development (Programming)
- Website Development
- Mobile app development
- Embedded Systems Programming
- Embedded Systems Development
- Software Testing
- Networking
- Database Administration
- System Administration
- Cyber Law Consultant
- GIS (Geographic Information Systems)
- IT Service Desk
- Security

#### And many others

The students will also be trained in communication skills and green computing.

## **SEMESTER I**

| B. Sc (Information Technology)      |          | Semester – I         |       |
|-------------------------------------|----------|----------------------|-------|
| Course Name: Imperative Programming |          | Course Code: USIT101 |       |
| Periods per week (1 Period is 50    | minutes) | 5                    |       |
| Credits                             |          | 2                    |       |
|                                     |          | Hours                | Marks |
| Evaluation SystemTheory Examination |          | <b>21</b> /2         | 75    |
|                                     | Internal |                      | 25    |

| Unit | Details   | Lectures |
|------|---|----------|
| I    | Introduction: Types of Programming languages, History, features and application. Simple program logic, program development cycle, pseudocode statements and flowchart symbols, sentinel value to end a program, programming and user environments, evolution of programming models., desirable program characteristics.<br>Fundamentals:<br>Structure of a program. Compilation and Execution of a Program, Character Set, identifiers and keywords, data types, constants, variables and arrays, declarations, expressions, statements, Variable definition, symbolic constants.   | 12       |
| Π    | Operators and Expressions:<br>Arithmetic operators, unary operators, relational and logical operators,<br>assignment operators, assignment operators, the conditional operator,<br>library functions.<br>Data Input and output:<br>Single character input and output, entering input data, scanf function,<br>printf function, gets and puts functions, interactive programming.  | 12       |
|      | Conditional Statements and Loops: Decision Making Within A<br>Program, Conditions, Relational Operators, Logical Connectives, If<br>Statement, If-Else Statement, Loops: While Loop, Do While, For Loop.<br>Nested Loops, Infinite Loops, Switch Statement<br>Functions:<br>Overview, defining a function, accessing a function, passing arguments<br>to a function, specifying argument data types, function prototypes,<br>recursion, modular programming and functions, standard library of c<br>functions, prototype of a function: foo1lal parameter list, return type,<br>function call, block structure, passing arguments to a function: call by<br>reference, call by value. | 12       |
| IV   | <ul> <li>Program structure:</li> <li>Storage classes, automatic variables, external variables, static variables, multifile programs, more library functions,</li> <li>Preprocessor: Features, #define and #include, Directives and Macros Arrays:</li> <li>Definition, processing, passing arrays to functions, multidimensional arrays, arrays and strings.</li> </ul>   | 12       |
| V    | <b>Pointers:</b><br>Fundamentals, declarations, Pointers Address Operators, Pointer Type Declaration, Pointer Assignment, Pointer Initialization, Pointer Arithmetic, Functions and Pointers, Arrays And Pointers, Pointer Arrays, passing functions to other functions   | 12       |

| Structures and Unions:  |  |  |
|---|--|--|
| Structure Variables, Initialization, Structure Assignment, Nested     |  |  |
| Structure, Structures and Functions, Structures and Arrays: Arrays of |  |  |
| Structures, Structures Containing Arrays, Unions, Structures and      |  |  |
| pointers.   |  |  |

| Books ar | Books and References:      |                 |             |                 |      |  |

|   | Internal              |                      |       |

| Practical: (Can be done in any imperative language)   |
|---|
| Basic Programs:   |
| Write a program to display the message HELLO WORLD.   |
| Write a program to declare some variables of type int, float and double. Assign   |
| some values to these variables and display these values.  |
| Write a program to find the addition, subtraction, multiplication and division of   |
| two numbers.  |
| Programs on variables:  |
| Write a program to swap two numbers without using third variable.   |
| Write a program to find the area of rectangle, square and circle.   |
| Write a program to find the volume of a cube, sphere, and cylinder.   |
|   |
| Conditional statements and loops(basic)   |
| Write a program to enter a number from the user and display the month name. If  |
| number >13 then display invalid input using switch case.  |
| Write a program to check whether the number is even or odd.   |
| Write a program to check whether the number is positive, negative or zero.  |
| Write a program to find the factorial of a number.  |
| Write a program to check whether the entered number is prime or not.  |
| Write a program to find the largest of three numbers.   |
| Conditional statements and loops(advanced)  |
| Write a program to find the sum of squares of digits of a number.   |
| Write a program to reverse the digits of an integer.  |
| Write a program to find the sum of numbers from 1 to 100.   |
| Write a programs to print the Fibonacci series.   |
| Write a program to find the reverse of a number.  |
| Write a program to find whether a given number is palindrome or not.  |
| Write a program that solve the quadratic equation   |
| $b = -b \pm \sqrt{b^2 - 4ac}$   |
|   |
| $\frac{2a}{2a}$ Write a program to check whether the entered number is Armstrong or not.                                    |
| Write a program to calcek whether the entered number is Armstrong of not.<br>Write a program to count the digit in a number |
|   |
| Programs on patterns:   |
|   |
|   |

| 6.  | Functions:  |  |
|-----|---|--|
| a.  | Programs on Functions.  |  |
|     |   |  |
| 7.  | Recursive functions   |  |
| a.  | Write a program to find the factorial of a number using recursive function.     |  |
| b.  | Write a program to find the sum of natural number using recursive function.     |  |
|     |   |  |
| 8.  | Arrays  |  |
| a.  | Write a program to find the largest value that is stored in the array.          |  |
| b.  | Write a program using pointers to compute the sum of all elements stored in an  |  |
|     | array.  |  |
| с.  | Write a program to arrange the 'n' numbers stored in the array in ascending and |  |
|     | descending order.   |  |
| d.  | Write a program that performs addition and subtraction of matrices.             |  |
| e.  | Write a program that performs multiplication of matrices.                       |  |
| 9.  | Pointers  |  |
| a.  | Write a program to demonstrate the use of pointers.                             |  |
| b.  | Write a program to perform addition and subtraction of two pointer variables.   |  |
| 10. | Structures and Unions   |  |
| a.  | Programs on structures.   |  |
| b.  | Programs on unions.   |  |

| 2.         Implement the given Boolean expressions using minimum num           a.         Verifying De Morgan's laws.  |            |
| a. Verifying De Morgan's laws.   |            |
| a. Verifying De Morgan's laws.   |            |
|  | <u>'S.</u> |
| b. Implement other given expressions using minimum number of gate  | S.         |
|  |            |
| c. Implement other given expressions using minimum number of ICs.  |            |
| 3. Implement combinational circuits.   |            |
| a. Design and implement combinational circuit based on the problem   | given and  |
| minimizing using K-maps.   | Sivenana   |
|  |            |
| 4. Implement code converters.  |            |
| a. Design and implement Binary – to – Gray code converter.   |            |
| b. Design and implement Gray – to – Binary code converter.   |            |
| c. Design and implement Binary – to – BCD code converter   |            |
| d. Design and implement Binary – to – XS-3 code converter  |            |
| 5. Implement Adder and Subtractor Arithmetic circuits.   |            |
| a. Design and implement Half adder and Full adder.   |            |
| b. Design and implement BCD adder.   |            |
| c. Design and implement XS – 3 adder.  |            |
| d. Design and implement binary subtractor.   |            |
| e. Design and implement BCD subtractor.  |            |
| f. Design and implement XS – 3 subtractor.   |            |
|  | -          |
| 6. Implement Arithmetic circuits.  |            |
| a. Design and implement a 2-bit by 2-bit multiplier.   |            |
| b. Design and implement a 2-bit comparator.  |            |
| 7. Implement Encode and Decoder and Multiplexer and Demultip   | lexers.    |
| a. Design and implement 8:3 encoder.   |            |
| b. Design and implement 3:8 decoder.   |            |
| c. Design and implement 4:1 multiplexer. Study of IC 74153, 74157  |            |
| d. Design and implement 1:4 demultiplexer. Study of IC 74139   |            |
| e. Implement the given expression using IC 74151 8:1 multiplexer.  |            |
| f. Implement the given expression using IC 74138 3:8 decoder.  |            |

| 8.  | Study of flip-flops and counters.  |
|-----|--|
| a.  | Study of IC 7473.  |
| b.  | Study of IC 7474.  |
| с.  | Study of IC 7476.  |
| d.  | Conversion of Flip-flops.  |
| e.  | Design of 3-bit synchronous counter using 7473 and required gates.                       |
| f.  | Design of 3-bit ripple counter using IC 7473.  |
|     |  |
| 9.  | Study of counter ICs and designing Mod-N counters.                                       |
| a.  | Study of IC 7490, 7492, 7493 and designing mod-n counters using these.                   |
| b.  | Designing mod-n counters using IC 7473 and 7400 (NAND gates)                             |
|     |  |
| 10. | Design of shift registers and shift register counters.                                   |
| a.  | Design serial – in serial – out, serial – in parallel – out, parallel – in serial – out, |
|     | parallel – in parallel – out and bidirectional shift registers using IC 7474.            |
| b.  | Study of ID 7495.  |
| с.  | Implementation of digits using seven segment displays.                                   |

| Unit | Details  | Lectures |
|------|--|----------|
| Ι    | Introduction:  |          |
|      | What is an operating system? History of operating system, computer     |          |
|      | hardware, different operating systems, operating system concepts,      |          |
|      | system calls, operating system structure.                              | 12       |
|      | Processes and Threads:   |          |
|      | Processes, threads, interprocess communication, scheduling, IPC        |          |
|      | problems.  |          |
| II   | Memory Management:   |          |
|      | No memory abstraction, memory abstraction: address spaces, virtual     |          |
|      | memory, page replacement algorithms, design issues for paging          |          |
|      | systems, implementation issues, segmentation.                          | 12       |
|      | File Systems:  | 14       |
|      | Files, directories, file system implementation, file-system management |          |
|      | and optimization, MS-DOS file system, UNIX V7 file system, CD          |          |
|      | ROM file system.   |          |
| III  | Input-Output:  |          |
|      | Principles of I/O hardware, Principles of I/O software, I/O software   |          |
|      | layers, disks, clocks, user interfaces: keyboard, mouse, monitor, thin |          |
|      | clients, power management,   | 12       |
|      | Deadlocks:   | 14       |
|      | Resources, introduction to deadlocks, the ostrich algorithm, deadlock  |          |
|      | detection and recovery, deadlock avoidance, deadlock prevention,       |          |
|      | issues.  |          |
| IV   | Virtualization and Cloud:  |          |
|      | History, requirements for virtualization, type 1 and 2 hypervisors,    |          |
|      | techniques for efficient virtualization, hypervisor microkernels,      |          |
|      | memory virtualization, I/O virtualization, Virtual appliances, virtual | 12       |
|      | machines on multicore CPUs, Clouds.                                    |          |
|      | Multiple Processor Systems   |          |
|      | Multiprocessors, multicomputers, distributed systems.                  |          |
| V    | Case Study on LINUX and ANDROID:                                       |          |
|      | History of Unix and Linux, Linux Overview, Processes in Linux,         |          |
|      | Memory management in Linux, I/O in Linux, Linux file system,           |          |
|      | security in Linux. Android   |          |
|      | Case Study on Windows:   | 12       |
|      | History of windows through Windows 10, programming windows,            |          |
|      | system structure, processes and threads in windows, memory             |          |
|      | management, caching in windows, I/O in windows, Windows NT file        |          |
|      | system, Windows power management, Security in windows.                 |          |

| Books an | Books and References:     |                |           |                 |      |  |

| List of  | Practical   |
|----------|---|
| 1.       | Installation of virtual machine software.   |
|          |   |
| 2.       | Installation of Linux operating system (RedHat / Ubuntu) on virtual machine.      |
|          |   |
| 3.       | Installation of Windows operating system on virtial machine.                      |
|          |   |
| 4.       | Linux commands: Working with Directories:   |
| a.       | pwd, cd, absolute and relative paths, ls, mkdir, rmdir,                           |
| b.       | file, touch, rm, cp. mv, rename, head, tail, cat, tac, more, less, strings, chmod |
|          |   |
| 5.       | Linux commands: Working with files:   |
| a.       | ps, top, kill, pkill, bg, fg,   |
| b.       | grep, locate, find, locate.   |
| C.       | date, cal, uptime, w, whoami, finger, uname, man, df, du, free, whereis, which.   |
| d.       | Compression: tar, gzip.   |
| 6.       | Windows (DOS) Commands – 1  |
| a.       | Date, time, prompt, md, cd, rd, path.   |
| b.       | Chkdsk, copy, xcopy, format, fidsk, cls, defrag, del, move.                       |
|          |   |
| 7.       | Windows (DOS) Commands – 2  |
| a.       | Diskcomp, diskcopy, diskpart, doskey, echo  |
| b.       | Edit, fc, find, rename, set, type, ver  |
|          |   |
| 8.       | Working with Windows Desktop and utilities  |
| a.       | Notepad   |
| b.       | Wordpad   |
| с.       | Paint   |
| d.       | Taskbar   |
| e.       | Adjusting display resolution  |
| f.       | Using the browsers  |
| g.       | Configuring simple networking   |
| h.       | Creating users and shares   |
| 9.       | Working with Linux Desktop and utilities  |
|          | The vi editor.  |
| a.<br>b. | Graphics  |
| 0.<br>C. | Terminal  |
| ι.       | 1 Offilingi   |

| d.  | Adjusting display resolution                     |
|-----|--|
| e.  | Using the browsers                               |
| f.  | Configuring simple networking                    |
| g.  | Creating users and shares                        |
|     |  |
| 10. | Installing utility software on Linux and Windows |

|----------|--|
| 1.       | Set Theory   |
| a.       | Inclusion Exclusion principle.                               |
| b.       | Power Sets   |
| с.       | Mathematical Induction                                       |
|          |  |
| 2.       | Functions and Algorithms                                     |
| a.       | Recursively defined functions                                |
| b.       | Cardinality  |
| с.       | Polynomial evaluation  |
| d.       | Greatest Common Divisor                                      |
|          |  |
| 3.       | Counting   |
| a.       | Sum rule principle   |
| b.       | Product rule principle                                       |
| с.       | Factorial  |
| d.       | Binomial coefficients  |
| e.       | Permutations   |
| f.       | Permutations with repetitions                                |
| g.       | Combinations   |
| h.       | Combinations with repetitions                                |
| i.       | Ordered partitions   |
| j.       | Unordered partitions   |
|          |  |
| 4.       | Probability Theory   |
| a.       | Sample space and events                                      |
| b.       | Finite probability spaces                                    |
| с.       | Equiprobable spaces  |
| d.       | Addition Principle   |
| e.       | Conditional Probability                                      |
| f.       | Multiplication theorem for conditional probability           |
| g.       | Independent events   |
| h.       | Repeated trials with two outcomes                            |
| 5.       | Croph Theory   |
| 3.<br>a. | Graph Theory       Paths and connectivity                    |
| a.<br>b. | Minimum spanning tree  |
| 0.<br>c. | Isomorphism  |
| U.       |  |
|          |  |
|          |  |

| 6.  | Directed Graphs  |
|-----|--|
| a.  | Adjacency matrix   |
| b.  | Path matrix  |
|     |  |
| 7.  | Properties of integers   |
| a.  | Division algorithm   |
| b.  | Primes   |
| с.  | Euclidean algorithm  |
| d.  | Fundamental theorem of arithmetic  |
| e.  | Congruence relation  |
| f.  | Linear congruence equation   |
|     |  |
| 8.  | Algebraic Systems  |
| a.  | Properties of operations   |
| b.  | Roots of polynomials   |
|     |  |
| 9.  | Boolean Algebra  |
| a.  | Basic definitions in Boolean Algebra                                       |
| b.  | Boolean algebra as lattices  |
|     |  |
| 10. | Recurrence relations   |
| a.  | Linear homogeneous recurrence relations with constant coefficients         |
| b.  | Solving linear homogeneous recurrence relations with constant coefficients |
| с.  | Solving general homogeneous linear recurrence relations                    |

| List of | Practical Questions:   |
|---------|--|
| 1.      | Communication Origami, Guessing Game, Guessing the emotion                   |
|         |  |
| 2.      | Body Language, Follow All Instructions, Effective Feedback Skills            |
|         |  |
| 3.      | The Name Game, Square Talk (Effective Communication), Room 101               |
|         | (Influential and persuasive skills)  |
|         |  |
| 4.      | Back to Back Communication, Paper Shapes (Importance of two-way              |
|         | communication), Memory Test(Presentation Skills)                             |
|         |  |
| 5.      | Exercises on Communication Principles  |
|         |  |
| 6.      | Exercises on communication icebreakers                                       |
|         |  |
| 7.      | Communication exercises  |
|         |  |
|         | For the following practicals, Microsoft Office, Open Office, Libre Office or |
| 0       | any other software suite can be used.  |
| 8.      | Use of word processing tools for communication                               |
| 0       | Lize of grandels out to ale for communication                                |
| 9.      | Use of spreadsheet tools for communication                                   |
| 10.     | Use of presentation tools for communication                                  |
| 10.     |  |

# SEMESTER II

| B. Sc. (Information Tech            | Semester – II        |       |       |
|-------------------------------------|----------------------|-------|-------|
| Course Name: Object Oriented        | Course Code: USIT201 |       |       |
| Periods per week (1 Period is 50    | 5                    |       |       |
| Credits                             |                      | 2     |       |
|                                     |                      | Hours | Marks |
| Evaluation SystemTheory Examination |                      | 21/2  | 75    |
|                                     | Internal             |       | 25    |

| Unit | Details   | Lectures |
|------|---|----------|
| Ι    | Object Oriented Methodology:  |          |
|      | Introduction, Advantages and Disadvantages of Procedure Oriented  |          |
|      | Languages, what is Object Oriented? What is Object Oriented   |          |
|      | Development? Object Oriented Themes, Benefits and Application of  | 12       |
|      | OOPS.   |          |
|      | Principles of OOPS: OOPS Paradigm, Basic Concepts of OOPS:  |          |
|      | Objects, Classes, Data Abstraction and Data Encapsulation,  |          |
|      | Inheritance, Polymorphism, Dynamic Binding, Message Passing   |          |
| II   | Classes and Objects: Simple classes (Class specification, class   |          |
|      | members accessing), Defining member functions, passing object as an   |          |
|      | argument, Returning object from functions, friend classes, Pointer to   | 12       |
|      | object, Array of pointer to object.   |          |
|      | Constructors and Destructors: Introduction, Default Constructor,  |          |
|      | Parameterized Constructor and examples, Destructors   |          |
| III  | Polymorphism: Concept of function overloading, overloaded   |          |
|      | operators, overloading unary and binary operators, overloading  |          |
|      | comparison operator, overloading arithmetic assignment operator, Data   | 12       |
|      | Conversion between objects and basic types,<br><b>Virtual Functions:</b> Introduction and need, Pure Virtual Functions, |          |
|      | Static Functions, this Pointer, abstract classes, virtual destructors.  |          |
| IV   | Program development using Inheritance: Introduction,  |          |
| 1 V  | understanding inheritance, Advantages provided by inheritance,  |          |
|      | choosing the access specifier, Derived class declaration, derived class   |          |
|      | constructors, class hierarchies, multiple inheritance, multilevel   | 12       |
|      | inheritance, containership, hybrid inheritance.   | 12       |
|      | <b>Exception Handling:</b> Introduction, Exception Handling Mechanism,  |          |
|      | Concept of throw & catch with example   |          |
| V    | <b>Templates:</b> Introduction, Function Template and examples, Class   |          |
|      | Template and examples.  | 12       |
|      | Working with Files: Introduction, File Operations, Various File   | 14       |
|      | Modes, File Pointer and their Manipulation  |          |

| Books and References: |  |  |                        |                            |      |
|-----------------------|--|--|------------------------|----------------------------|------|
| Sr. No.               | Title                                  | Author/s   | Publisher              | Edition                    | Year |
| 1.                    | Object Oriented Analysis<br>and Design | Timothy Budd                                       | ТМН                    | 3 <sup>rd</sup>            | 2012 |
| 2.                    | Mastering C++                          | K R Venugopal,<br>Rajkumar Buyya,<br>T Ravishankar | Tata<br>McGraw<br>Hill | 2 <sup>nd</sup><br>Edition | 2011 |

| 3. | C++ for beginners         | B. M. Hirwani   | SPD        |                 | 2013 |
|----|---------------------------|-----------------|------------|-----------------|------|
| 4. | Effective Modern C++      | Scott Meyers    | SPD        |                 |      |
| 5. | Object Oriented           | E. Balagurusamy | Tata       | 4 <sup>th</sup> |      |
|    | Programming with C++      |                 | McGraw     |                 |      |
|    |                           |                 | Hill       |                 |      |
| 6. | Learning Python           | Mark Lutz       | O' Reilly  | 5 <sup>th</sup> | 2013 |
| 7. | Mastering Object Oriented | Steven F. Lott  | Pact       |                 | 2014 |
|    | Python                    |                 | Publishing |                 |      |

| B. Sc. (Information Technology)                    |   | Semester – II        |       |
|--|---|----------------------|-------|
| Course Name: Object Oriented Programming Practical |   | Course Code: USIT2P1 |       |
| Periods per week (1 Period is 50                   | Periods per week (1 Period is 50 minutes) |                      | 3     |
| Credits  |   |                      | 2     |
|  |   | Hours                | Marks |
| Evaluation System                                  | Practical Examination                     | 21/2                 | 50    |
|  | Internal                                  |                      |       |

| List of | Practical: To be implemented using object oriented language  |
|---------|--|
| 1.      | Classes and methods  |
| a.      | Design an employee class for reading and displaying the employee information, the getInfo() and displayInfo() methods will be used repectively. Where getInfo() will be private method   |
| b.      | Design the class student containing getData() and displayData() as two of its methods which will be used for reading and displaying the student information respectively.Where getData() will be private method.   |
| с.      | Design the class Demo which will contain the following methods: readNo(), factorial() for calculating the factorial of a number, reverseNo() will reverse the given number, isPalindrome() will check the given number is palindrome, isArmstrong() which will calculate the given number is armStrong or not.Where readNo() will be private method. |
| d.      | Write a program to demonstrate function definition outside class and accessing class members in function definition.   |
| 2.      | Using friend functions.  |
| a.      | Write a friend function for adding the two complex numbers, using a single class   |
| b.      | Write a friend function for adding the two different distances and display its sum, using two classes.   |
| с.      | Write a friend function for adding the two matrix from two different classes and display its sum.  |
|         |  |
| 3.      | Constructors and method overloading.   |
| a.      | Design a class Complex for adding the two complex numbers and also show the use of constructor.  |
| b.      | Design a class Geometry containing the methods area() and volume() and also overload the area() function .   |
| c.      | Design a class StaticDemo to show the implementation of static variable and static function.   |
| 4.      | Operator Overloading   |
| a.      | Overload the operator unary(-) for demonstrating operator overloading.   |
| b.      | Overload the operator + for adding the timings of two clocks, And also pass objects as an argument.  |
| с.      | Overload the + for concatenating the two strings. For e.g " $Py$ " + "thon" = Python   |
| 5.      | Inheritance  |
| a.      | Design a class for single level inheritance using public and private type derivation.  |
| b.      | Design a class for multiple inheritance.   |
| с.      | Implement the hierarchical inheritance.  |

| 6.  | Virtual functions and abstract classes   |
|-----|--|
| a.  | Implement the concept of method overriding.                                      |
| b.  | Show the use of virtual function   |
| с.  | Show the implementation of abstract class.                                       |
|     |  |
| 7.  | String handling  |
| a.  | String operations for string length, string concatenation                        |
| b.  | String operations for string reverse, string comparison,                         |
| с.  | Console formatting functions.  |
|     |  |
| 8.  | Exception handling   |
| a.  | Show the implementation of exception handling                                    |
| b.  | Show the implementation for exception handling for strings                       |
| с.  | Show the implementation of exception handling for using the pointers.            |
|     |  |
| 9.  | File handling  |
| a.  | Design a class FileDemo open a file in read mode and display the total number of |
|     | words and lines in the file.   |
| b.  | Design a class to handle multiple files and file operations                      |
| с.  | Design a editor for appending and editing the files                              |
|     |  |
| 10. | Templates  |
| a.  | Show the implementation for the following  |
| b.  | Show the implementation of template class library for swap function.             |
| с.  | Design the template class library for sorting ascending to descending and vice-  |
|     | versa  |

| B. Sc. (Information Technology) Semester – II              |   |              | er – II |

| Unit | Details  | Lectures |
|------|--|----------|
| Ι    | Microprocessor, microcomputers, and Assembly Language:   |          |
|      | Microprocessor, Microprocessor Instruction Set and Computer                                    |          |
|      | Languages, From Large Computers to Single-Chip Microcontrollers,                               |          |
|      | Applications.  |          |
|      | Microprocessor Architecture and Microcomputer System:  |          |
|      | Microprocessor Architecture and its operation's, Memory, I/O Devices,                          |          |
|      | Microcomputer System, Logic Devices and Interfacing,   | 12       |
|      | Microprocessor-Based System Application.   |          |
|      | 8085 Microprocessor Architecture and Memory Interface:   |          |
|      | Introduction, 8085 Microprocessor unit, 8085-Based Microcomputer,                              |          |
|      | Memory Interfacing, Interfacing the 8155 Memory Segment,                                       |          |
|      | Illustrative Example: Designing Memory for the MCTS Project,                                   |          |
|      | Testing and Troubleshooting Memory Interfacing Circuit, 8085-Based Single-Board microcomputer. |          |
| II   | Interfacing of I/O Devices   |          |
| - 11 | Basic Interfacing concepts, Interfacing Output Displays, Interfacing                           |          |
|      | Input Devices, Memory Mapped I/O, Testing and Troubleshooting I/O                              |          |
|      | Interfacing Circuits.  |          |
|      | Introduction to 8085 Assembly Language Programming:  |          |
|      | The 8085 Programming Model, Instruction Classification, Instruction,                           |          |
|      | Data and Storage, Writing assembling and Execution of a simple                                 | 12       |
|      | program, Overview of 8085 Instruction Set, Writing and Assembling                              |          |
|      | Program.   |          |
|      | Introduction to 8085 Instructions:   |          |
|      | Data Transfer Operations, Arithmetic Operations, Logic Operation,                              |          |
|      | Branch Operation, Writing Assembly Languages Programs, Debugging                               |          |
|      | a Program.   |          |
| III  | Programming Techniques With Additional Instructions:   |          |
|      | Programming Techniques: Looping, Counting and Indexing,  |          |
|      | Additional Data Transfer and 16-Bit Arithmetic Instructions,                                   |          |
|      | Arithmetic Instruction Related to Memory, Logic Operations: Rotate,                            |          |
|      | Logics Operations: Compare, Dynamic Debugging.   |          |
|      | Counters and Time Delays:  |          |
|      | Counters and Time Delays, Illustrative Program: Hexadecimal Counter,                           | 12       |
|      | Illustrative Program: zero-to-nine (Modulo Ten) Counter, Generating                            |          |
|      | Pulse Waveforms, Debugging Counter and Time-Delay Programs.                                    |          |
|      | Stacks and Sub-Routines:   |          |
|      | Stack, Subroutine, Restart, Conditional Call, Return Instructions,                             |          |
|      | Advanced Subroutine concepts.  |          |
|      |  |          |

| IV | Code Conversion, BCD Arithmetic, and 16-Bit Data Operations:        |    |  |  |  |
|----|---|----|--|--|--|
|    | BCD-to-Binary Conversion, Binary-to-BCD Conversion, BCD-to-         |    |  |  |  |
|    | Seven-Segment-LED Code Conversion, Binary-to-ASCII and ASCII-       |    |  |  |  |
|    | to-Binary Code Conversion, BCD Addition, BCD Subtraction,           |    |  |  |  |
|    | Introduction To Advanced Instructions and Applications,             |    |  |  |  |
|    | Multiplication, Subtraction With Carry.                             |    |  |  |  |
|    | Software Development System and Assemblers:                         | 12 |  |  |  |
|    | Microprocessors-Based Software Development system, Operating        |    |  |  |  |
|    | System and Programming Tools, Assemblers and Cross-Assemblers,      |    |  |  |  |

|  | Internal                     |                |              |

| List of | Practical  |
|---------|--|
| 1.      | Perform the following Operations related to memory locations.                      |
| a.      | Store the data byte 32H into memory location 4000H.                                |
| b.      | Exchange the contents of memory locations 2000H and 4000H                          |
|         |  |
| 2.      | Simple assembly language programs.   |
| a.      | Subtract the contents of memory location 4001H from the memory location 2000H      |
|         | and place the result in memory location 4002H.                                     |
| b.      | Subtract two 8-bit numbers.  |
| с.      | Add the 16-bit number in memory locations 4000H and 4001H to the 16-bit number     |
|         | in memory locations 4002H and 4003H. The most significant eight bits of the two    |
|         | numbers to be added are in memory locations 4001H and 4003H. Store the result in   |
|         | memory locations 4004H and 4005H with the most significant byte in memory          |
|         | location 4005H.  |
| d.      | Add the contents of memory locations 40001H and 4001H and place the result in      |
|         | the memory locations 4002Hand 4003H.   |
| e.      | Subtract the 16-bit number in memory locations 4002H and 4003H from the 16-bit     |
|         | number in memory locations 4000H and 4001H. The most significant eight bits of     |
|         | the two numbers are in memory locations 4001H and 4003H. Store the result in       |
|         | memory locations 4004H and 4005H with the most significant byte in memory          |
|         | location 4005H.  |
| f.      | Find the l's complement of the number stored at memory location 4400H and store    |
|         | the complemented number at memory location 4300H.                                  |
| g.      | Find the 2's complement of the number stored at memory location 4200H and store    |
|         | the complemented number at memory location 4300H.                                  |
|         |  |
| 3.      | Packing and unpacking operations.  |
| a.      | Pack the two unpacked BCD numbers stored in memory locations 4200H and 4201H       |
|         | and store result in memory location 4300H. Assume the least significant digit is   |
| -       | stored at 4200H.   |
| b.      | Two digit BCD number is stored in memory location 4200H. Unpack the BCD            |
|         | number and store the two digits in memory locations 4300H and 4301H such that      |
|         | memory location 4300H will have lower BCD digit.                                   |
|         |  |
| 4.      | Register Operations.   |
| a.      | Write a program to shift an eight bit data four bits right. Assume that data is in |
|         | register C.  |
| b.      | Program to shift a 16-bit data 1 bit left. Assume data is in the HL register pair  |
| c.      | Write a set of instructions to alter the contents of flag register in 8085.        |
| d.      | Write a program to count number of l's in the contents of D register and store the |
|         | count in the B register.   |
|         |  |

| 5. | Multiple memory locations.   |
|----|--|
| a. | Calculate the sum of series of numbers. The length of the series is in memory  |
|    | location 4200H and the series begins from memory location 4201H. a. Consider the   |
|    | sum to be 8 bit number. So, ignore carries. Store the sum at memory location 4300H.  |
|    | b. Consider the sum to be 16 bit number. Store the sum at memory locations 4300H   |
|    | and 4301H  |
| b. | Multiply two 8-bit numbers stored in memory locations 2200H and 2201H by repetitive addition and store the result in memory locations 2300H and 2301H. |
| с. | Divide 16 bit number stored in memory locations 2200H and 2201H by the 8 bit   |
|    | number stored at memory location 2202H. Store the quotient in memory locations   |
|    | 2300H and 2301H and remainder in memory locations 2302H and 2303H.   |
| d. | Find the number of negative elements (most significant bit 1) in a block of data. The  |
|    | length of the block is in memory location 2200H and the block itself begins in   |
|    | memory location 2201H. Store the number of negative elements in memory location  |
|    | 2300H  |
| e. | Find the largest number in a block of data. The length of the block is in memory   |
|    | location 2200H and the block itself starts from memory location 2201H. Store the   |
|    | maximum number in memory location 2300H. Assume that the numbers in the block  |
|    | are all 8 bit unsigned binary numbers.   |
|    |  |
| 6. | Calculations with respect to memory locations.   |
| a. | Write a program to sort given 10 numbers from memory location 2200H in the   |
|    | ascending order.   |
| b. | Calculate the sum of series of even numbers from the list of numbers. The length of  |
|    | the list is in memory location 2200H and the series itself begins from memory  |
|    | location 2201H. Assume the sum to be 8 bit number so you can ignore carries and  |
|    | store the sum at memory location 2Sample problem:  |
| с. | Calculate the sum of series of odd numbers from the list of numbers. The length of   |
|    | the list is in memory location 2200H and the series itself begins from memory  |
|    | location 2201H. Assume the sum to be 16-bit. Store the sum at memory locations   |
|    | 2300H and 2301H.   |
| d. | Find the square of the given numbers from memory location 6100H and store the  |
|    | result from memory location 7000H  |
| e. | Search the given byte in the list of 50 numbers stored in the consecutive memory   |
|    | locations and store the address of memory location in the memory locations 2200H   |
|    | and 2201H. Assume byte is in the C register and starting address of the list is 2000H.   |
|    | If byte is not found store 00 at 2200H and 2201H   |
| f. | Two decimal numbers six digits each, are stored in BCD package form. Each  |
|    | number occupies a sequence of byte in the memory. The starting address of first  |
|    | number is 6000H Write an assembly language program that adds these two numbers   |
|    | and stores the sum in the same format starting from memory location 6200H  |
| g. | Add 2 arrays having ten 8-bit numbers each and generate a third array of result. It is   |
|    | necessary to add the first element of array 1 with the first element of array-2 and so   |
|    | on. The starting addresses of array l, array2 and array3 are 2200H, 2300H and  |
|    | 2400H, respectively  |
|    |  |
|    |  |
|    |  |
|    |  |

| 7.  | Assembly programs on memory locations.   |
|-----|--|
| a.  | Write an assembly language program to separate even numbers from the given list  |
|     | of 50 numbers and store them in the another list starting from 2300H. Assume   |
|     | starting address of 50 number list is 2200H  |
| b.  | Write assembly language program with proper comments for the following:  |
|     | A block of data consisting of 256 bytes is stored in memory starting at 3000H.   |
|     | This block is to be shifted (relocated) in memory from 3050H onwards. Do not shift   |
|     | the block or part of the block anywhere else in the memory.  |
| с.  | Add even parity to a string of 7-bit ASCII characters. The length of the string is in  |
|     | memory location 2040H and the string itself begins in memory location 2041H.   |
|     | Place even parity in the most significant bit of each character.   |
| d.  | A list of 50 numbers is stored in memory, starting at 6000H. Find number of  |
|     | negative, zero and positive numbers from this list and store these results in memory   |
|     | locations 7000H, 7001H, and 7002H respectively   |
| e.  | Write an assembly language program to generate fibonacci number.   |
| f.  | Program to calculate the factorial of a number between 0 to 8.   |
|     | ~  |
| 8.  | String operations in assembly programs.  |
| a.  | Write an 8085 assembly language program to insert a string of four characters from   |
| 1   | the tenth location in the given array of 50 characters   |
| b.  | Write an 8085 assembly language program to delete a string of 4 characters from  |
|     | the tenth location in the given array of 50 characters.  |
| с.  | Multiply the 8-bit unsigned number in memory location 2200H by the 8-bit unsigned  |
|     | number in memory location 2201H. Store the 8 least significant bits of the result in   |
| d.  | memory location 2300H and the 8 most significant bits in memory location 2301H.  |
| u.  | Divide the 16-bit unsigned number in memory locations 2200H and 2201H (most significant bits in 2201H) by the B-bit unsigned number in memory location 2300H |
|     | store the quotient in memory location 2400H and remainder in 2401H   |
| e.  | DAA instruction is not present. Write a sub routine which will perform the same  |
| С.  | task as DAA.   |
|     |  |
| 9.  | Calculations on memory locations.  |
| a.  | To test RAM by writing '1' and reading it back and later writing '0' (zero) and reading  |
|     | it back. RAM addresses to be checked are 40FFH to 40FFH. In case of any error, it  |
|     | is indicated by writing 01H at port 10   |
| b.  | Arrange an array of 8 bit unsigned no in descending order  |
| с.  | Transfer ten bytes of data from one memory to another memory block. Source   |
|     | memory block starts from memory location 2200H where as destination memory   |
|     | block starts from memory location 2300H  |
| d.  | Write a program to find the Square Root of an 8 bit binary number. The binary  |
|     | number is stored in memory location 4200H and store the square root in 4201H.  |
| e.  | Write a simple program to Split a HEX data into two nibbles and store it in memory   |
|     |  |
| 10. | Operations on BCD numbers.   |
| a.  | Add two 4 digit BCD numbers in HL and DE register pairs and store result in  |
|     | memory locations, 2300H and 2301H. Ignore carry after 16 bit.  |
| b.  | Subtract the BCD number stored in E register from the number stored in the D   |
|     | register   |
| с.  | Write an assembly language program to multiply 2 BCD numbers   |

| Unit | Details   | Lectures |
|------|---|----------|
| Ι    | Internet and the World Wide Web:  |          |
|      | What is Internet? Introduction to internet and its applications, E-mail, telnet, FTP, e-commerce, video conferencing, e-business. Internet service providers, domain name server, internet address, World Wide Web (WWW): World Wide Web and its evolution, uniform resource locator (URL), browsers – internet explorer, Netscape navigator, opera, Firefox, chrome, Mozilla. search engine, web saver – apache, IIS, proxy server, HTTP protocol <b>HTML5</b> : Introduction, Why HTML5? Formatting text by using tags, using lists and backgrounds, Creating hyperlinks and anchors. Style sheets, CSS formatting text using style sheets, formatting paragraphs using style sheets.   | 12       |
| II   | HTML5 Page layout and navigation:   |          |
|      | Creating navigational aids: planning site organization, creating text<br>based navigation bar, creating graphics based navigation bar, creating<br>graphical navigation bar, creating image map, redirecting to another<br>URL, creating division based layouts: HTML5 semantic tags, creating<br>divisions, creating HTML5 semantic layout, positioning and formatting<br>divisions.<br><b>HTML5 Tables, Forms and Media:</b><br>Creating tables: creating simple table, specifying the size of the table,<br>specifying the width of the column, merging table cells, using tables for<br>page layout, formatting tables: applying table borders, applying<br>background and foreground fills, changing cell padding, spacing and<br>alignment, creating user forms: creating basic form, using check boxes<br>and option buttons, creating lists, additional input types in HTML5,<br>Incorporating sound and video: audio and video in HTML5, HTML<br>multimedia basics, embedding video clips, incorporating audio on web<br>page. | 12       |
| ш    | Java Script: Introduction, Client-Side JavaScript, Server-Side<br>JavaScript, JavaScript Objects, JavaScript Security,<br>Operators: Assignment Operators, Comparison Operators, Arithmetic<br>Operators, % (Modulus), ++(Increment),(Decrement), -(Unary<br>Negation), Logical Operators, Short-Circuit Evaluation, String<br>Operators, Special Operators, ?: (Conditional operator), , (Comma<br>operator), delete, new, this, void<br>Statements: Break, comment, continue, delete, dowhile, export, for,<br>forin, function, ifelse, import, labelled, return, switch, var, while,<br>with,  | 12       |

|    | Core JavaScript (Properties and Methods of Each) : Array,<br>Boolean, Date, Function, Math, Number, Object, String, regExp<br>Document and its associated objects: document, Link, Area, Anchor,<br>Image, Applet, Layer<br>Events and Event Handlers : General Information about Events,<br>Defining Event Handlers, event, onAbort, onBlur, onChange, onClick,<br>onDblClick, onDragDrop, onError, onFocus, onKeyDown,<br>onKeyPress, onKeyUp, onLoad, onMouseDown, onMouseMove,<br>onMouseOut, onMouseOver, onMouseUp, onMove, onReset,<br>onResize, onSelect, onSubmit, onUnload |    |
|----|--|----|
| IV | <b>PHP:</b><br>Why PHP and MySQL? Server-side scripting, PHP syntax and variables, comments, types, control structures, branching, looping, termination, functions, passing information with PHP, GET, POST, formatting form variables, superglobal arrays, strings and string functions, regular expressions, arrays, number handling, basic PHP errors/problems  | 12 |
| V  | Advanced PHP and MySQL : PHP/MySQL Functions, Integrating<br>web forms and databases, Displaying queries in tables, Building Forms<br>from queries, String and Regular Expressions, Sessions, Cookies and<br>HTTP, E-Mail  | 12 |

| Books and References: |                           |                  |           |                 |      |
|-----------------------|---------------------------|------------------|-----------|-----------------|------|

| List of | Practical  |
|---------|--|
| 1.      | Use of Basic Tags  |
| a.      | Design a web page using different text formatting tags.                            |
| b.      | Design a web page with links to different pages and allow navigation between       |
|         | web pages.   |
| с.      | Design a web page demonstrating all Style sheet types                              |
|         |  |
| 2.      | Image maps, Tables, Forms and Media  |
| a.      | Design a web page with Imagemaps.  |
| b.      | Design a web page demonstrating different semantics                                |
| с.      | Design a web page with different tables. Design a webpages using table so that     |
|         | the content appears well placed.   |
| d.      | Design a web page with a form that uses all types of controls.                     |
| e.      | Design a web page embedding with multimedia features.                              |
|         |  |
| 3.      | Java Script  |
| a.      | Using JavaScript design, a web page that prints factorial/Fibonacci series/any     |
|         | given series.  |
| b.      | Design a form and validate all the controls placed on the form using Java Script.  |
| с.      | Write a JavaScript program to display all the prime numbers between 1 and 100.     |
| a.      | Write a JavaScript program to accept a number from the user and display the sum    |
|         | of its digits.   |
| d.      | Write a program in JavaScript to accept a sentence from the user and display the   |
|         | number of words in it. (Do not use split () function).                             |
| e.      | Write a java script program to design simple calculator.                           |
|         |  |
| 4.      | Control and looping statements and Java Script references                          |
| a.      | Design a web page demonstrating different conditional statements.                  |
| b.      | Design a web page demonstrating different looping statements.                      |
| с.      | Design a web page demonstrating different Core JavaScript references (Array,       |
|         | Boolean, Date, Function, Math, Number, Object, String, regExp).                    |
|         |  |
| 5.      | Basic PHP I  |
| a.      | Write a PHP Program to accept a number from the user and print it factorial.       |
| b.      | Write a PHP program to accept a number from the user and print whether it is prime |
|         | or not.  |
| 6.      | Basic PHP II   |
| a.      | Write a PHP code to find the greater of 2 numbers. Accept the no. from the user.   |

| b.  | Write a PHP program to display the following Binary Pyramid:                       |
|-----|--|
|     | 1  |
|     | 0 1  |
|     | 1 0 1  |
|     | 0 1 0 1  |
|     |  |
| 7.  | String Functions and arrays  |
| a.  | Write a PHP program to demonstrate different string functions.                     |
| b.  | Write a PHP program to create one dimensional array.                               |
|     |  |
| 8.  | PHP and Database   |
| a.  | Write a PHP code to create:  |
|     | Create a database College  |
|     | • Create a table Department (Dname, Dno, Number_Of_faculty)                        |
| b.  | Write a PHP program to create a database named "College". Create a table named     |
|     | "Student" with following fields (sno, sname, percentage). Insert 3 records of your |
|     | choice. Display the names of the students whose percentage is between 35 to 75     |
|     | in a tabular format.   |
| с.  | Design a PHP page for authenticating a user.                                       |
|     |  |
| 9.  | Email  |
| a.  | Write a program to send email with attachment.                                     |
|     |  |
| 10. | Sessions and Cookies   |
| a.  | Write a program to demonstrate use of sessions and cookies.                        |

| Books an | Books and References:                     |  |                        |                 |      |  |
|----------|---|--|------------------------|-----------------|------|--|

| List of   | Practical  |
|-----------|--|
| 1.        | Iterative Calculation  |
| a.        | Program for iterative calculation.   |
| b.        | Program to calculate the roots of a quadratic equation using the formula.                                |
| с.        | Program to evaluate $e^x$ using infinite series.   |
|           |  |
| 2.        | Solution of algebraic and transcendental equations:  |
| a.        | Program to solve algebraic and transcendental equation by bisection method.                              |
| b.        | Program to solve algebraic and transcendental equation by false position method.                         |
| с.        | Program to solve algebraic and transcendental equation by Secant method.                                 |
| d.        | Program to solve algebraic and transcendental equation by Newton Raphson method.                         |
| 3.        | Interpolation  |
| a.        | Program for Newton's forward interpolation.  |
| b.        | Program for Newton's backward interpolation.   |
| с.        | Program for Lagrange's interpolation.  |
|           |  |
| 4.        | Solving linear system of equations by iterative methods  |
| a.        | Program for solving linear system of equations using Gauss Jordan method.                                |
| b.        | Program for solving linear system of equations using Gauss Seidel method.                                |
| 5.        | Numerical Differentiation  |
| a.        | Programing to obtain derivatives numerically.  |
| 6         |  |
| <u>6.</u> | Numerical Integration  |
| a.        | Program for numerical integration using Trapezoidal rule.  |
| b.        | Program for numerical integration using Simpson's 1/3 <sup>rd</sup> rule.                                |
| с.        | Program for numerical integration using Simpson's 3/8 <sup>th</sup> rule.                                |
| 7.        | Solution of differential equations   |
| a.        | Program to solve differential equation using Euler's method  |
| b.        | Program to solve differential equation using modified Euler's method.                                    |
| c.        | Program to solve differential equation using Runge-kutta 2 <sup>nd</sup> order and 4 <sup>th</sup> order |
|           | methods.   |
|           |  |
| 8.        | Regression   |
| a.        | Program for Linear regression.   |
| b.        | Program for Polynomial Regression.   |

| с.  | Program for multiple linear regression.     |
|-----|---|
| d.  | Program for non-linear regression.          |
|     |   |
| 9.  | Random variables and distributions          |
| a.  | Program to generate random variables.       |
| b.  | Program to fit binomial distribution.       |
| с.  | Program to fit Poisson distribution.        |
|     |   |
| 10. | Distributions                               |
| a.  | Program for Uniform distribution.           |
| b.  | Program for Bernoulli distribution          |
| с.  | Program for Negative binomial distribution. |

|   | Internal                     |                      |       |

| Projec | Project and Viva Voce   |  |  |  |
|--------|---|--|--|--|
| 1.     | A project should be done based on the objectives of Green Computing. A report   |  |  |  |
|        | of minimum 50 pages should be prepared. The report should have a font size of 12, Times new roman and 1.5 line spacing. The headings should have font |  |  |  |
|        | size 14. The report should be hard bound.   |  |  |  |
| 2.     | The project can be done individually or a group of two students.  |  |  |  |
| 3.     | The students will have to present the project during the examination.   |  |  |  |
| 4.     | A certified copy of the project report is essential to appear for the examination.  |  |  |  |

#### **Evaluation Scheme:**

1. Internal Evaluation (25 Marks). i Test 1 Class test of 20 ma

| Q  | Attempt <u>any four</u> of the following: | 20 |
|----|---|----|
| a. |   |    |
| b. |   |    |
| c. |   |    |
| d. |   |    |
| e. |   |    |
| f. |   |    |

# . Test: 1 Class test of 20 marks. (Can be taken online)

### ii. 5 marks: Active participation in the class, overall conduct, attendance.

## 2. External Examination: (75 marks)

|    | All questions are compulsory                                 |    |
|----|--|----|
| Q1 | (Based on Unit 1) Attempt <u>any three</u> of the following: | 15 |
| a. |  |    |
| b. |  |    |
| c. |  |    |
| d. |  |    |
| e. |  |    |
| f. |  |    |
|    |  |    |
| Q2 | (Based on Unit 2) Attempt <u>any three</u> of the following: | 15 |
| Q3 | (Based on Unit 3) Attempt <u>any three</u> of the following: | 15 |
| Q4 | (Based on Unit 4) Attempt <u>any three</u> of the following: | 15 |
| Q5 | (Based on Unit 5) Attempt <u>any three</u> of the following: | 15 |

#### 3. Practical Exam: 50 marks

A Certified copy journal is essential to appear for the practical examination.

| 1. | Practical Question 1 | 20 |
|----|----------------------|----|
| 2. | Practical Question 2 | 20 |
| 3. | Journal              | 5  |
| 4. | Viva Voce            | 5  |

OR

| 1. | Practical Question | 40 |
|----|--------------------|----|
| 2. | Journal            | 5  |
| 3. | Viva Voce          | 5  |
